POMONA ELECTRONICS

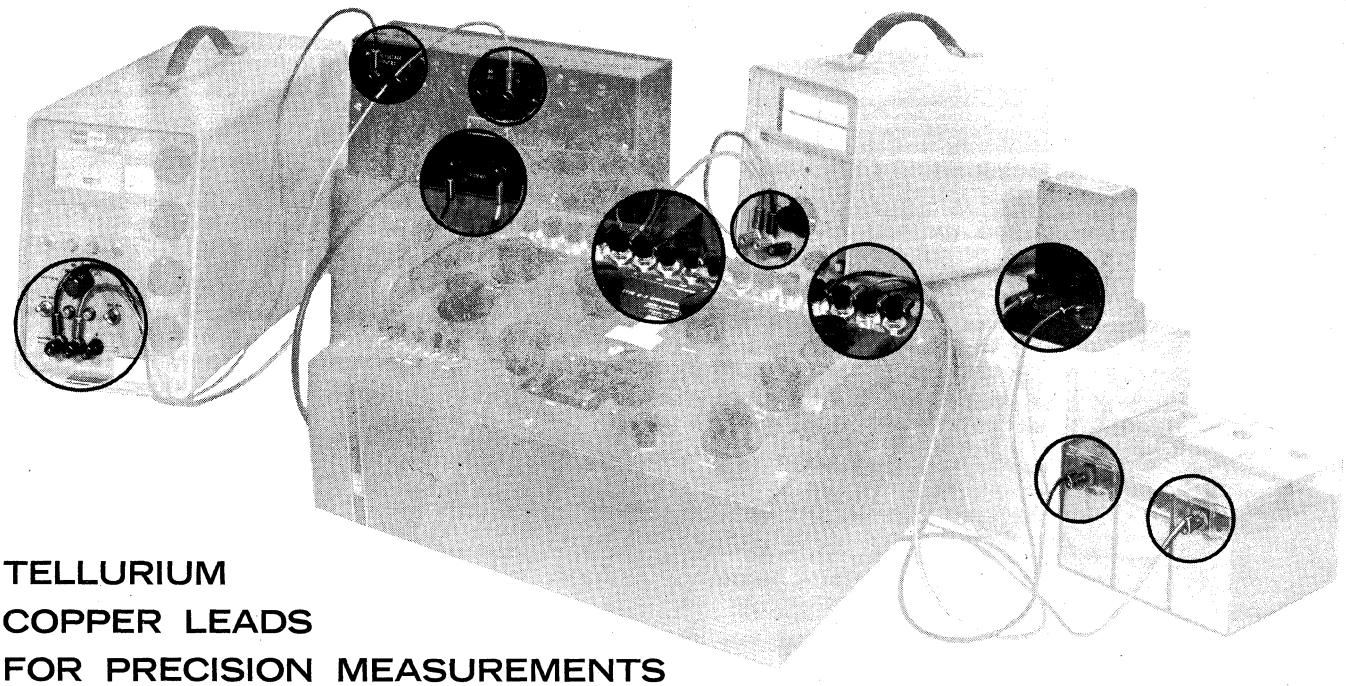
JUMPERS— LOW THERMAL E.M.F.



TELLURIUM COPPER LEADS FOR PRECISION MEASUREMENTS

POMONA ELECTRONICS has advanced the state of the art in measurements where Thermoelectric Effects are significant sources of error. Comparators designed for use with the Kelvin-Varley voltage divider and microvolt leads were tested with Primary Standards Laboratory equipment.

Thermoelectric voltages were not detected until the most sensitive galvanometer range was used.

THERMOELECTRIC PROPERTIES—Tellurium copper gold plated spade lugs cold-staked to multi-stranded 12 gauge COPPER wire minimize thermoelectric effects—an absolute necessity for low voltage, high precision measurements.

LOW RESISTANCE—12 gauge multi-stranded COPPER wire results in extremely low cable resistance. Spade lugs plated with 50 micro inches gold for minimum contact resistance and minimum thermal EMF when using copper binding posts. (Less than 0.01 μv/c°).

CATHODE RAY TUBE TEST ADAPTERS

■ POMONA Test Socket Adapters are ideal for making measurements of voltage, resistance, and video from the base of the picture tube. The test socket adapter is inserted between the CR Tube base and its socket. This completes the circuit and makes all connections readily accessible. Measurements can be made without tracing circuit wiring to test points below the chassis, thereby saving valuable time and increasing efficiency in trouble shooting.

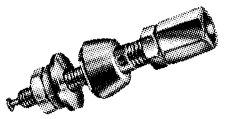
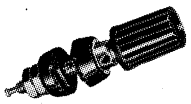
HEX NUT TYPES

Rated for 30 amperes, 1000 volts working. Brass parts are gold-plated; plastic parts are of nylon compounded to meet military specifications MIL-M-20693A, Type IV. Nickel-plated brass types available on order.



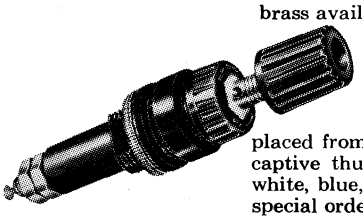
GROUNDING TYPE

For making rapid connections to ground. Made of finely machined brass nickel-plated and polished. Panel grounding collar frozen to shaft has "D" type shoulder for locking in keyed panel hole.



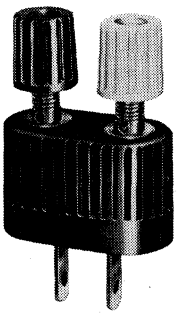
MINIATURE TYPES

Fluted nut design only. Rated for 15 amperes, 1000 volts working. Gold-plated brass parts; nylon plastic parts compounded to meet military specification MIL-M-20693A, Type IV. Types with nickel-plated brass available also.



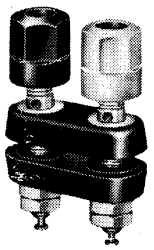
FUSED TYPE

Rated for 250 volts, 15 amperes maximum. Built-in fuseholder accepts standard type 3AG fuse (not supplied). Fuse can be replaced from front of panel. Type FP15BGC has black captive thumbnut; types with noncaptive black, red, white, blue, yellow and green thumbnuts available on special order.



DUAL ADAPTER TYPE

Designed to facilitate line voltage connections from output receptacles to binding posts. Has integral parallel-blade plug. Rating is 15 amperes, 125 volts. Body is black; captive black and white thumbnuts are mounted on ¾" centers. Brass parts are gold-plated. Ideal for safe, rigid connections to equipment lacking a parallel-blade plug and cord assembly.



DOUBLE ASSEMBLY TYPES

For instrument and equipment panels requiring binding posts mounted on ¾" centers. Rated for a current capacity of 30 amperes and a working voltage of 1000 volts. Brass parts are gold-plated; panel insulators in black only. Rugged, self-contained assembly makes mounting more accurate, faster and easier than two individual binding posts and gives maximum strength where connections are frequently made.

NOTES

1. Teflon should protrude .040" min. below chassis.
2. Clearance between punch and die should be held to normal shop tolerances governed by material and thickness and type.
3. Predrawn hole size is governed by material type and thickness.
4. Die diameter is punch diameter plus double the metal thickness, tolerances being consistent with normal shop practice.

INSTALLATION PROCEDURE

Simplest, fastest, most economical terminal installation known, with practically no restriction as to chassis material and thickness.

Inexpensive insertion tool available from Sealectro, facilitates installation. Tool fits any drillpress (power off) or hand arbor press, to hold given PRESS-FIT Terminal. Centered over chassis hole, and with applied pressure, the PRESS-FIT Terminal slips into the hole for a rigid permanent, trouble-free installation. Just PRESS-FIT — that's it! In four easy steps:

(1) PUNCH OR DRILL HOLE . . .
.013"±.002" less than diameter of terminal section (dia. "G" in tables) passing through chassis. Minimum protrusion of bushing passing through chassis, .040". Maximum thickness of chassis .125"; for greater thickness, ask for our recomcomendations. Countersink from breakout or die side of chassis (not from punch side).

(2) COUNTERSINK ENTRANCE EDGE . . .
Use 60° countersink when chassis thickness is .040" and over; use 82° countersink when chassis thickness is less than .040". This enables centering of terminal in hole and prevents scoring the Teflon bushing. Depth and maximum diameter of countersink is determined by thickness of chassis stock and bushing's major diameter.

(3) INSERTION TOOL . . .
Insertion tool is placed in chuck of drillpress (power off) or hand arbor press. Terminal is held by tool, leaving assembler's hands free to index and center chassis hole underneath tool. Proper pressure is applied and released just as soon as major diameter of terminal seats itself.

(4) PERMANENT INSTALLATION . . .
PRESS-FIT Terminal is now permanently secured in place.

"Press-Fit" installation for deep holes. As the terminal is pressfitted into the hole, the lands and grooves of the body are deflected upward, thus providing a high degree of pull-out strength as illustrated in the accompanying sketch.

Typical deep hole terminal Type FT-SM-705-L2 is a feedthru featuring a wield terminal at bottom. In this particular case, the wire is welded to the bottom terminal and drawn through the hole before terminal is pressfitted into place.

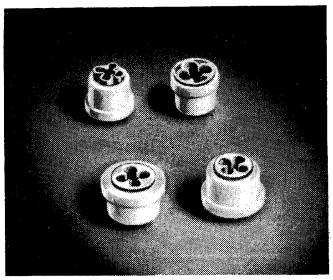
CLOVERLEAF FEED-THRUS



The "Press-Fit" Cloverleaf Receptacle provides economical, yet uniformly perfect solder joints by means by dip-soldering with metal chassis. The unique Cloverleaf configuration permits insertion of four, or more wire leads, plus an optional center pin post for mounting additional components after the dip-soldering operation.

SEALECTRO PROGRAM SWITCHING

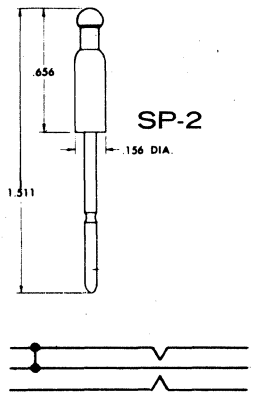
SEALECTOBOARD MODULAR CORDLESS PROGRAM BOARDS

"Sealectoboard" programming and switching provides complete ease and simplicity of operation with drastic reductions in hardware and space. The units consist of two decks of bussed contacts running at right angles to each other in the X and Y directions, forming an electrical matrix. A single shorting or component holding pin is used to complete the program circuit... move the pin to a new location and a new program function is generated.

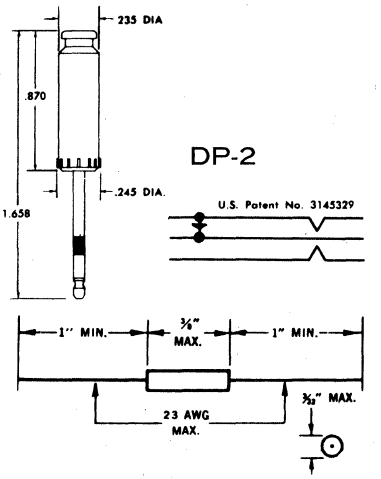
The "Modular Sealectoboard" provides an extremely flexible means of program system expansion with a built-in appearance. The system consists of only four standard component assemblies, designed such that when installed in a standard E.I.A. 19" relay rack, or bench cabinet, they result in a very attractive unit.

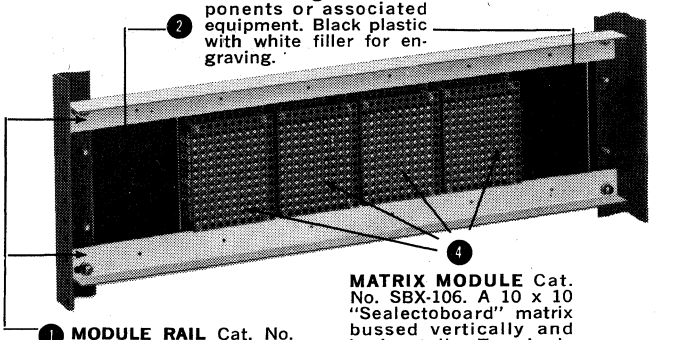
The "Modular Sealectoboard" can be expanded from a 10 x 10 hole matrix to a 10 x 60 hole matrix in one standard 5 7/32" x 19" rack panel. Additional panels can be added and interwired to expand program capacity as system requirements dictate.

SHORTING PIN



COMPONENT PIN



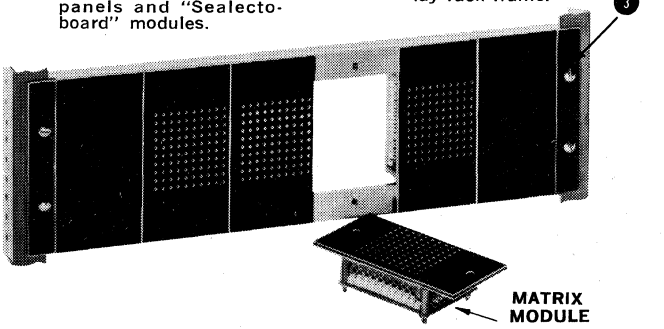


BLANK PANEL Cat. No. SBX-106-2. Fills in unused width. May be used for mounting other components or associated equipment. Black plastic with white filler for engraving.

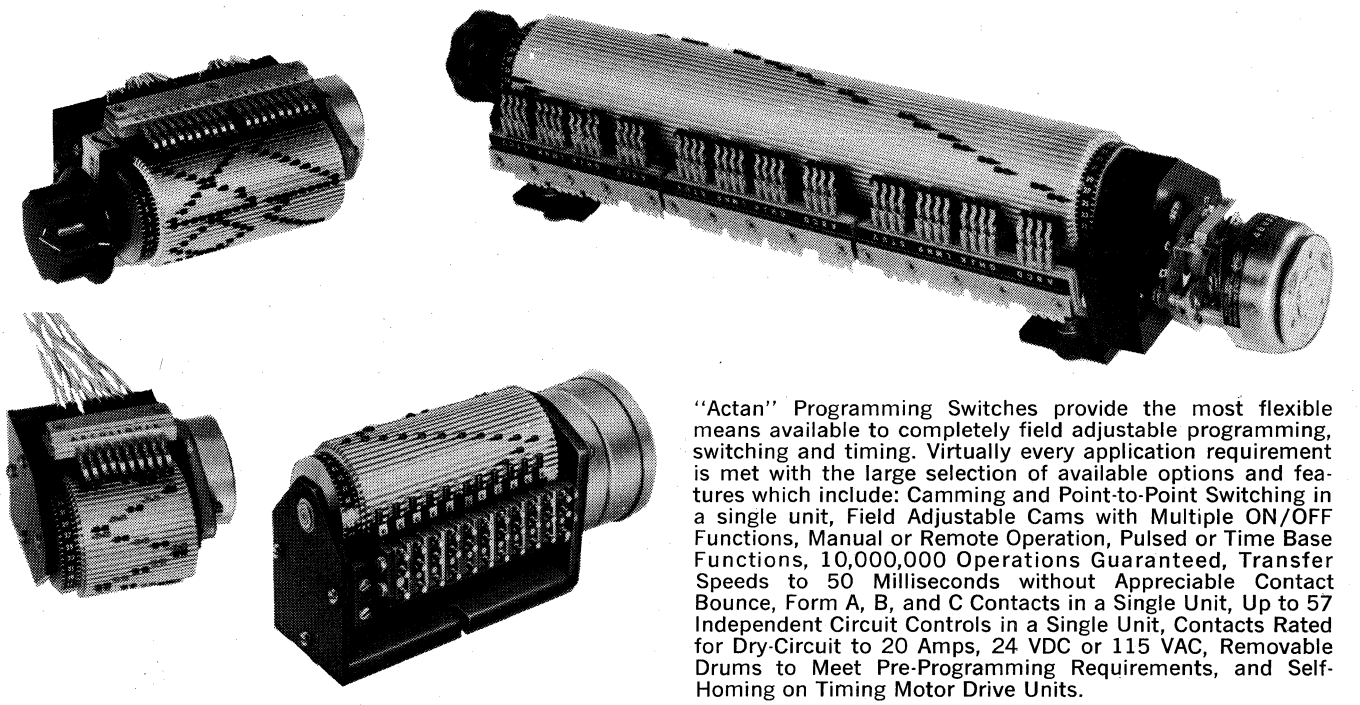
MATRIX MODULE Cat. No. SBX-106. A 10 x 10 "Sealectoboard" matrix bussed vertically and horizontally. Terminals are combination solder and Klip-on. Contact strips are silver plated.

MODULE RAIL Cat. No. SBX-106-1. Rails are designed for mounting on standard 19" relay racks. Offset is provided for flush panel installation. Mounting holes are provided for any combination (up to 6) of blank panels and "Sealectoboard" modules.

SIDE PLATE Cat. No. SBX-106-3. Provides end dressing, or return to relay rack frame.



ACTAN FIELD ADJUSTABLE PROGRAMMING SWITCHES



"Actan" Programming Switches provide the most flexible means available to completely field adjustable programming, switching and timing. Virtually every application requirement is met with the large selection of available options and features which include: Camming and Point-to-Point Switching in a single unit, Field Adjustable Cams with Multiple ON/OFF Functions, Manual or Remote Operation, Pulsed or Time Base Functions, 10,000,000 Operations Guaranteed, Transfer Speeds to 50 Milliseconds without Appreciable Contact Bounce, Form A, B, and C Contacts in a Single Unit, Up to 57 Independent Circuit Controls in a Single Unit, Contacts Rated for Dry-Circuit to 20 Amps, 24 VDC or 115 VAC, Removable Drums to Meet Pre-Programming Requirements, and Self-Homing on Timing Motor Drive Units.

INSTALLATION PROCEDURE FOR TEFLON TERMINALS

1. For chassis or panels ⅛" (.125") or less in thickness, punch or drill hole .013" ±.002" LESS than the diameter of the bushing (dimension "A" in the tables). Minimum protrusion of assembled terminal should be .040" (dimension "B" less chassis thickness) for greater holding power. Recommendations for panels greater than .125" thick are available on request.
2. Countersink the insertion side of the chassis. For chassis thicker than .040" use 60° countersink. For chassis less than .040" thick use 90° countersink. Countersink depth should be such that "Maj. Dia." shown in drawing is equal to bushing diameter (Dimension "A") of the terminal.
3. Insert terminal in countersunk side of chassis, and press until shoulder of terminal seats against chassis.

ARROW, HART & HEGEMAN "SNAP ACTING" MOMENTARY CONTACT SWITCHES

PRECISION SNAP-ACTING SWITCH A precision snap-acting switch is a mechanically operated electric switch having predetermined and accurately controlled characteristics, and having contacts other than the blade and jaw, or mercury type, where the maximum separation between any butting contacts is 1/8 inch.

MOMENTARY CONTACT SWITCH A momentary contact switch is a switch which returns from the operated condition to its normal circuit condition when the actuating force is removed.

ACTUATOR An actuator is the mechanism of the switch or enclosure which, when moved as intended, will operate the contacts.

OPERATING FORCE Operating force is that straight line force in the designated direction applied to the actuator to cause the switch contacts to snap to the operated contact position.

PRETRAVEL Pretravel is the distance or angle through which the actuator moves from the actuator free position to the actuator operating position.

OVERTRAVEL Overtravel is the movement of the actuator beyond the operating position.

MOVEMENT DIFFERENTIAL Movement differential is the distance or angle from the operating position to the releasing position.

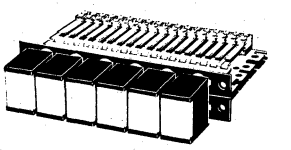
SLIDE ACTION . . . Series 39000 "Multi-Slide" switches provide design engineers with an entirely new switching method to solve man-machine system problems. "Multi-Slide" switches help eliminate operating confusion inherent in constant manipulation of pushbutton matrixes by providing slide-switch variety. **Series 39000 Switches** offer 3 types of actuation: interlock, all-lock, non-lock.



PUSHBUTTON ACTION . . . Whatever your requirements for switching, you will find Switchcraft "Multi-Switch" switches enable you to design a cybernetically correct, error-reducing panel. Both illuminated and non-illuminated types are available with non-lock, all-lock, interlock, push-to-lock, push-to-release functions. Illuminated types offer single or multiple lighting effects. **Series 7000 and 21000** frames are available from 1 to 37 stations in a row. "MULTI-SLIDE" SWITCHES

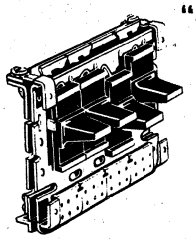
SERIES 39000



Revolutionary compact switching method provides versatile multiple station slide switching. Allows 1 to 18 stations per row standard on all but all-lock function which is limited to 12 stations. Requires only ¾" depth behind panel. Narrow frame design permits mounting on compact electronic equipment without sacrificing versatility or function. Three standard functions available: **Interlock:** actuating slidebutton automatically restores previously actuated station to normal. Only one slidebutton can be actuated at a time with standard interlock function. **Nonlock:** each station has momentary action with no interaction between stations. **All-lock:** all stations, except release, lock when depressed—restore to normal when release button is actuated. Special slide-to-release cancelling feature in interlock and all-lock frames permits immediate correction of switching error without cancelling actuated switches. Slidebuttons are on ⅝" centers. Up to 3 miniature switch stacks, rated at 3 amps; 300 watts max., AC non-inductive load, can be mounted at each station for a minimum of 1-A (SPDT) to a max. of 3-C (3PDT) per station. To order, refer to "SWITCH STACKS", Series 80P, 800P. For power switching, snap switch modules can be mounted to each station. Refer to "PIGGY BACK" SNAP-SWITCH MODULES, Series SA, SC and SD under littel "Multi-Switch" listing. Switch frames mount on panels up to ⅛" thick. End brackets have four 6-32 tapped mtg. holes. A black slidebutton is furnished for each station and a red slidebutton is supplied when switch requires a release. A kit of chromatic legend tabs, **Part No. K-120,** is available for positive color coding of an actuated station. Kit consists of 10 tabs each of 6 colors: Red, black, green, blue, white and yellow. Pressure sensitive tabs mount easily in recess of slidebutton; can be hot-stamped for identification. The following part numbers cover basic frame only. To complete assembly, order switch stacks for each station and/or snap-switch modules, as required. Only the most commonly used frames are listed here. For complete engineering information on Series 39000 switches, request Switchcraft Bulletin 158.

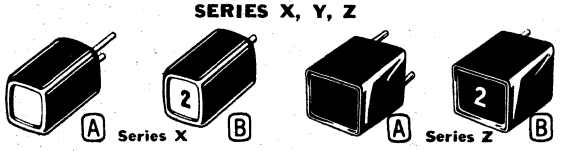
"GLO-BUTTONS"

SERIES X, Y, Z



Economy of non-illuminated buttons with the vivid color-legend display of illuminated buttons. "Glo-Buttons" look and function like an illuminated button, but require no lamp or power. Mount on all pushbutton switches with std. .050" x .187" plungers, as Switchcraft Series 7000, 8000, and 35000 "Multi-Switch", and other switches having maintained plunger action with a max. of 1/16" **fallback.** "Glo-Buttons" have a translucent front screen on which a legend is marked in an opaque color. The opaque color provides a background for the legend while the legend itself remains clear **(Figs. A).** An internal fluorescent illuminator is carried on a pusher which has two legs extending from the rear. When the button is depressed, the rear legs of the pusher bring the fluorescent illuminator flush with the screen which then lights up due to reflected ambient light, and projects a clearly visible legend, see **Figs. B.** All "Glo-Buttons" have black button housings and are available with std. legends: **"A"** thru **"Z"**, **"0"** thru **"50"**, and **"ON"**, **"OFF"**. Eight basic types of buttons are offered: To order, specify part number and add suffix letter or numeral to part number which describes desired legend. Example: To order ½" sq. "Glo-Button" with black screen, orange-red illuminator and numeral "7", part number would read X21248-7.

PATCH CORDS, JACK PANELS AND TELEPHONE PLUGS: Audio, Broadcast, Miniature

TRIMM patch cords feature telephone type plugs on cords built to withstand hard use. Two or more conductors of bronze tinsel are covered with numerous layers of insulation and waterproofing. The cords are color coded, shielded (if desired) then covered with a final braid of nylon to assure long service. The nylon is standard black unless a color is specified. Available at a slight extra charge are: Blue (BL), Brown (BR), Green (GR), Red (RD), Slate Gray (GY) and White (WH).

"840" PATCH CORDS

Broadcast type "506" twin plugs at both ends. Conductors are wired to tip and the shield (when used) is connected to the grounded shaft. Commonly supplied with shield attached at one end only. Available without shield (W in code number), or with shield attached at both ends (X in code number). PP indicates the cord has a plug at both ends.

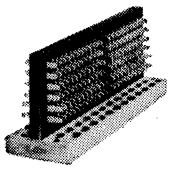
TERMINAL BLOCKS, TURN AND PUSH KEYS, LAMP SOCKETS: Related Panel Equipment



TERMINAL BLOCKS

Originally developed for telephone and telegraph exchange use, now are quite generally found in broadcast and microwave relay stations, large instrument systems —wherever very large numbers of circuits need convenient places of termination.

"421 SERIES"

Molded of black phenolic plastic material, including base. Provides 20 terminals per row, in two banks of ten, with up to ten rows. Base 6 1/16" long x 3" wide. Has steel mounting strip inset in groove in base, with standard mounting dimensions and accommodating #10-24 screws.

Terminals are of 0.040" tin plated brass, and are removable without dissassembly of block. Have "butterfly" notched design assuring better retention of wire. Lengths of terminals in three graduated lengths for ease of wiring, and are usually identified by numbering along top row. (Not illustrated). Interchangeable with W.E. "L" series, as indicated by ( ) following TRIMM No.

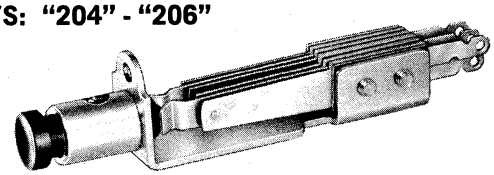
PUSH KEYS: "204" - "206"



Long frame push button type key very similar to turn keys. The usual applications for push button type keys are as an impulse switch for relays, or motor starters; buzzer signals, test circuits requiring momentary contact, etc. Mounting, dimensional and contact data, similar to turn keys. Available in non-locking and locking forms. Knob of black plastic material with depressed dimple for finger.

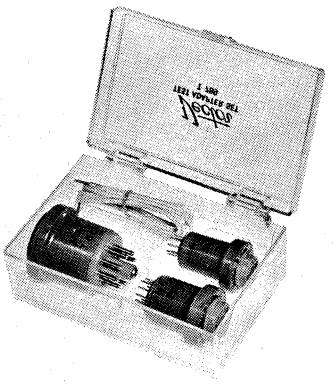
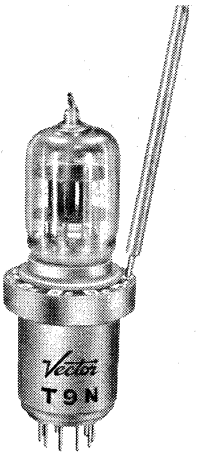
TUBE SOCKET TEST ADAPTERS



T-789



T9N

TUBE SOCKET TEST ADAPTERS are ideal for making voltage resistance and wave form measurements from the tube side of electronic equipment. To use, insert adapter between tube and socket, and replace tube in adapter socket. Special test tabs are recessed on the adapter skirt and have a hole to grip test probe and protect operator's fingers during insertion and withdrawal. Regular alligator test-clipped probes also hold on tab and socket. Castings are low loss phenolic and fit all shield bases for miniature and noval type or into standard tube clamps. Reduced body diameter permits insertion into new telescoping shields. Adapter socket contacts are beryllium copper, silver plated for long life and low resistance. Electrostatic capacity between adjacent leads of the adapter is approximately 1 micro-micro-farad. Flash over voltage between adjacent terminals is in excess of 1500 volts DC.

Kit T789 consists of the three popular "must have" sizes, 7-pin miniature, 8-pin octal, 9-pin noval and a P1 probe in a handy clear plastic carrying case.

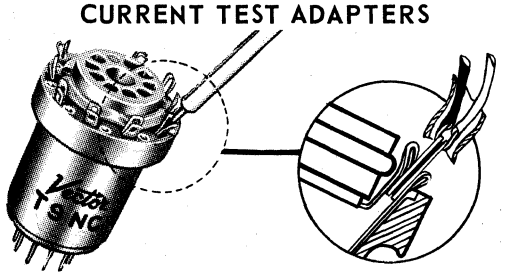
CURRENT TEST ADAPTERS



Versatile VECTOR CURRENT TEST ADAPTERS make possible tube circuit current or voltage measurements without cutting leads or making computations. All measurements may be made from the tube side of the electronic equipment without disturbing the chassis.

EXTENDED TUBE SOCKET TEST ADAPTERS

For most work the short, unshielded adapters are adequate. For hard to reach locations or where surrounding equipment restricts use of regular test adapters, the 3 to 4 inch extended adapter may be used. In these the leads between plug and socket are individually shielded to minimize coupling. The shield is brought out to a lug on the wall of the adapter and should be connected to the chassis being tested. Capacity to shield is approx. 8 mmf. per lead.

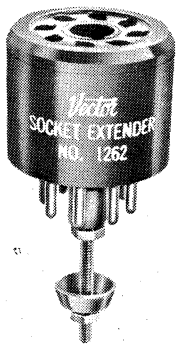
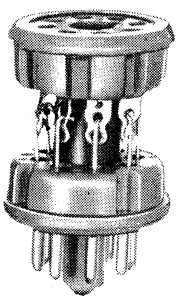
SOCKET EXTENDERS EXPERIMENTER'S TEST ADAPTERS



1262



TX-8-0

Socket extenders provide a replaceable unit for use in tube testers and expensive meters. Wear is shifted from the socket in the tester to the one in the extender so that when it is worn out a new one can be easily inserted. Sockets have beryllium copper silver plated contacts for long life. An all molded outside shell is used with socket leads soldered to plug pins. All units provided with 1¾" long screw to hold unit firmly in place if desired.

EXPERIMENTER'S TEST ADAPTERS. These are similar to the Socket Test Adapter but are less the shells and tabs so that connections can be cross-connected in any desired way. User must solder connections.

PIGGY-BACK PLUG

Vector Fixed Panel style Patchboards provide simple but reliable low-cost units for multiple connection, single conductor patching for test panels, automation and telemetry equipment, low cost computers, numerical control equipment, paging and speaker systems or other equipment where economy and connection multiplicity are desired.

Extremely low contact resistance (less than .001 ohms) and long contact life (over 2000 insertions per contact without resistance change) assures reliability.

All boards are marked front and back with horizontal rows lettered alphabetically and vertical columns numbered. Brackets for mounting are supplied. Holes for plugs are .093" diameter, spaced on .265" centers. Front panels are removable and may be changed if necessary. Larger contact systems can be made by mounting standard panels adjacent. Special sizes, special marking and screening in colors are made to order at minimum cost.

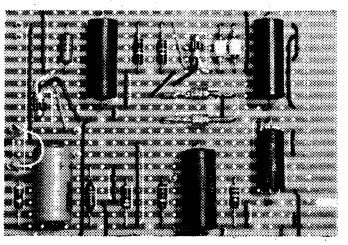
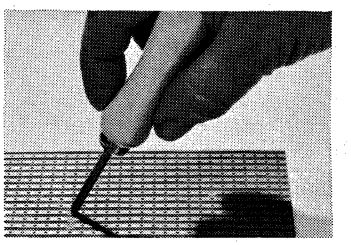
VEROBOARD KITS
UNIVERSAL WIRING BOARDS

BUILD ANY CIRCUIT IN 2 EASY STEPS
NO ETCHING — NO WIRES — NO TERMINALS

STEP NO. 1

Lay out components on the back (plain) side of the Veroboard across the copper strips inserting leads into appropriate holes. You have now connected your components as required using the copper strips as your interconnectors. Leads may be soldered directly to the strips using a light, printed circuit type iron. Careful soldering will enable you to remove components and replace them if required.





STEP NO. 2

Break the circuit where required by breaking the copper strips with the Vero spot-face cutter provided in your kit. The cutter is a precision, hardened steel tool which has a pilot pin that fits into any hole, and two cutting edges. Simply turn the cutter several times and the copper strip in the area of the chosen hole will be removed. Your circuit is now complete.

WITH THESE VEROBOARD KITS

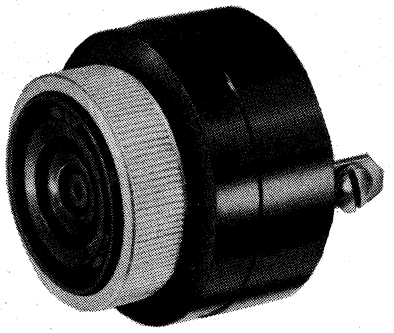
Sonalert®
electronic audible signal

Sonalert is a startling innovation in the audible signal-warning field. It produces a penetrating sound by purely electronic means. Circuitry is all "solid-state" for maximum efficiency, lowest current requirements, and highest reliability. Because circuitry *is* solid-state, there is no arcing, no RF noise, and no mechanical wear.

Sonalert is very compact, very light, and highly versatile. Consuming less current than a normal indicator light, the device can be utilized to complement visual signals. Thus, positive audible warnings are instantly given in fault alarms for computers, fire signals, instruments, medical electronics, appliances, communications as well as telephone signals and protection equipment.



MILITARY APPLICATIONS

Sonalert signals are not covered by detailed military specifications as such. However, Sonalert signals are employed in many types of military electronic equipment. The signals* meet or exceed the following requirements:

1. Vibration, per MIL-C-5422
2. Humidity, per MIL Standard 202A, Method 106A
3. Salt Spray, per MIL-E-4970
4. High Impact, per MIL-S-901B (Units withstand 600G impact).
5. Environmental, Per MIL-E-5400 with Class I equipment covering these criteria;
   a. Low temperature storage
   b. Low temperature operation
   c. High temperature storage
   d. High temperature operation
   e. Altitude
   f. High temperature humidity

*NOTE: Models SC628S, SC628SH, and SC110S are preferred types for military applications.

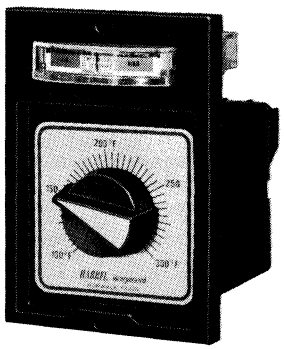
PRECISION SOLID STATE TEMPERATURE CONTROLLERS

GENERAL

Harrel temperature controllers are intended for the precision temperature control of ovens, test fixtures, and all kinds of industrial machinery. They are arranged for easy mounting on any panel and are designed to require minimum panel space.

Temperature sensing is by means of a wire-type resistance sensor. This gives long-term stability and sensitivity which cannot be equalled by any other method of temperature sensing. The temperature sensor may be located as much as several hundred feet from the controller if desired. No special lead wires or shielding are required between controller and sensor.



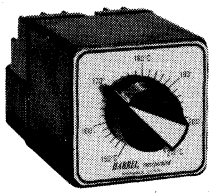
Indicating Controller

ON-OFF RELAY CONTROLLERS

Utilize a rugged, solid state amplifier controlling a 10-ampere relay. Relay is easily replaceable in the field.

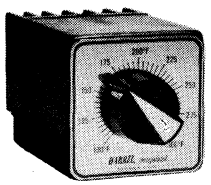
TIME PROPORTIONING RELAY TYPES

Similar to regular on-off controller, but controller operates on a regular cycle of on to off and back again, and it is the **proportion** of on-to-off time which is varied to control the temperature. Gives a characteristic which approximates true proportional control and in general gives greatly improved performance over regular on-off controllers.



TRUE PROPORTIONAL TYPES

Completely solid state. No relays, contacts, or moving parts whatsoever in the power control circuits. Output does not cycle on and off but remains steady at exactly the amount necessary to hold the temperature at precisely the desired value. True stepless control gives closest temperature control of any type of controller. Elimination of contacts and moving parts means life measured in years.



INDICATING FORMS

The system of display employed on indicating forms of the controller is designed especially for automated systems. The temperature is both set and read out on the large easy-to-read dial. The indicator is separate, and is of the go/no-go type which gives a visual alarm whenever the actual temperature is not at the set point. No skill or knowledge is required of the operator. All he has to do is be sure that the indicator stays out of the two red zones. Indicating forms are mounted on an attractive escutcheon arranged for easy panel mounting or indicator may be located remotely if desired.

SENSORS

A number of different forms of sensors are available for the above

a. **Patch Sensor:** For measuring the temperature of surfaces. Thin and flexible; may be attached by means of an adhesive or with tape (supplied).

b. **Oval:** Sensors wound on oval hollow ceramic core. Bracket mount for sensing air temperature.

c. **Tubular:** Cylindrical sensors in aluminum or stainless steel protecting jackets. May be mounted in solids, liquids, or gases.

TC-396E	TC-496E	True Proportional	100-500°F	1.5°C	1000 watts**	149.00	166.00

* For on-off, temperature change at sensor to go from on to off and vice versa. For time proportioning, temperature change for 30% to 75% power output. For true proportional, temperature change from 10% to 80% full power output. Note that temperature performance for proportional types will in general be much better than figure shown; full proportional band is seldom required to compensate for changes in external conditions.

** At 25°C ambient temperature. Derate linearly to zero at 100°C ambient temperature. For indicating types, heater must be arranged so that steady state power output (that is the power other than during warm-up and cool-down) is between 5% and 75% of full power output.

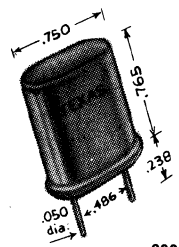
1,601 to 2,000 KC .005% TOL.	3.55		

All TEXAS CRYSTALS are cut, lapped, and etched to exact frequencies. They are supplied for oscillator circuits having 32 MMFD capacity, unless otherwise ordered, as the crystal frequency will vary with capacity of the circuit.

Low frequency crystals from 1001 KC to 2100 KC are space mounted — all others are pressure mounted. The advantage of the pressure mount crystal is its ability to handle more current (up to 50 Milliwatts) without capacity (if known) or type of equipment in which it is to be used.

HERMETICALLY SEALED CRYSTALS MADE TO ORDER



In recent years, manufacturers have engineered new equipment utilizing the hermetically sealed plated crystal (HC6/U). This crystal is either gold or silver plated, the plating acting as electrodes. These crystals should be used in circuits designed for them as the maximum current capacity is 10 milliwatts (5 milliwatts for overtone type). High stability of frequency is a characteristic of this crystal. All TEXAS CRYSTALS are made to conform with military specifications. When ordering for G.E., Motorola, Link, etc., for split channel operation, a sample of both transmitting and receiving crystals known to be correct, be sent us with order specifying exact crystal frequency desired. We will correlate crystals and return your samples. Type HC6/U has .050 pins and fits CE-1 socket. Type HC17/U is the same physical size except the pins are .093 diameter. Specify type circuit, if known. Order by fundamental frequency, type circuit, type holder. All plated crystals are .005% tolerance.

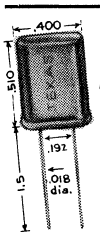
NOTE: When ordering Fundamental Frequency Crystals, specify Crystal Load Capacity. For tolerance of .01% and .02%, also for quantities of more than 100 of the same frequency, write for quotations.



MINIATURE CRYSTALS HC18/U

Miniature Type

Sub Miniature Crystals will operate in the same circuits as HC6/U and HC17/U Crystals. They were designed for use where space is a factor. Supplied in either Pin Type or Wire Leads (½" length for soldering directly into circuit.).

Be sure to specify Pin Type or Wire Leads.

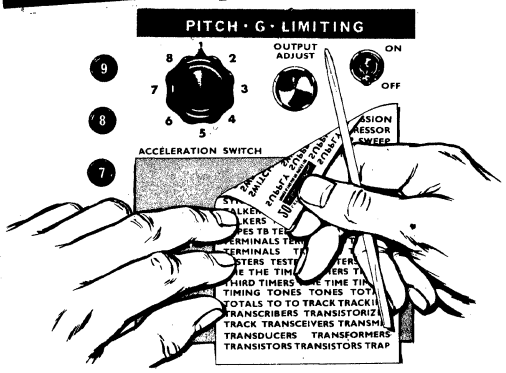
instant lettering® THE REVOLUTIONARY METHOD FOR MARKING ELECTRONIC EQUIPMENT



JUST RUB... and it's printed!

Sharp • Clean • Fast • Not a Decal • No Water • No Tapes

INSTANT LETTERING® marking kits bring you all the necessary elements for completely marking electronic equipment, prototypes, drawings, etc. in this fast new easy-to-use form. There's even a new drafting symbol kit for better more readable schematics.

Words, letters, numerals, switch patterns, arcs, drafting symbols, etc. are printed on a special transparent carrier film. Rubbing over one of these elements with a ballpoint pen releases it from the carrier film and adheres it to your working surface.

INSTANT LETTERING® words and symbols transfer to almost any surface including glass, plastic, even painted and bare metals. Now you can quickly mark all panels, even especially calibrated two-color nomenclatures, pilot light jewels, sub-assemblies, circuit boards, etc. Reproduction quality **INSTANT LETTERING®** transfers are clean and sharp, leave no background haze or film, make prototypes look like finished production equipment and give all equipment and drawings a professional look.

DRI-TRANSFER® LETTERING

- Easiest and most economical method of applying letters, symbols and illustrations to all dry smooth surfaces, many rough surfaces, most flat or curved objects.
- A special wax-free adhesive assures lasting permanence and a crisp, clear transfer every time.
- Once applied, a DRI-TRANSFER® image will not peel, crack or blister when exposed to heat, chemicals or mechanical action of copy machines.
- Titles, captions and notations down to the smallest letters and numbers are always sharply defined.
- Perfect for prints, spec sheets, layouts, files, folders, cards, name plates, slides, equipment marking, identification, printed circuit artwork, prototypes, control panels, etc.
- Errors easily rectified with rubber cement p' k-up or eraser.
- Clear lacquer spray gives ultimate permanence when transferred to metal or glass surfaces.
- Color: Black only.

Four Step Method — Simple and Quick

CDE CORNELL-DUBILIER

Radio Interference Filters

RESIDENTIAL, LIGHT COMMERCIAL RFI FILTERS

These QUIETONE® Radio Interference filters are designed for residential and light commercial applications on appliances and office machines. Noise from small portable electrical appliances can usually be reduced through use of a circuit 1 filter. The circuit 2 filter, IF-6, will provide slightly more reduction. The greatest attenuation will be achieved through the use of circuit 4 filters — IF-18 and 19.

CDE Type	Circuit Diagram	Voltage	Cap. Mfd.	Current	Description
IF-4	1	110 AC/DC	.1	5	Plastic cylindrical filter with plug and receptacle
IF-6	2	110 AC/DC	2 x .1	5	Plastic cylindrical filter with plug, receptacle and side ground terminal
IF-18	4	115 AC/DC	2 x .25	5	Rectangular plastic cased filter with line cord and plug, receptacle and ground terminal.
IF-19	4	115 AC/DC	2 x .1	5	Smaller rectangular plastic cased filter with line cord and plug, receptacle and ground terminal.

COMMERCIAL RADIO INTERFERENCE FILTERS

The NF-1C230 is designed for installation in vacuum cleaners, floor polishers, etc. Other filters listed are UL listed for fluorescent fixtures but are frequently applied to other equipment. The vehicular filters listed on the following page also find wide industrial applications.

CDE Type	Voltage	Cap. (Mfd.)	Current	Description
IF-24	110 AC/DC	2 x .1	—	Cylindrical metal cased with flexible leads and bracket
IF-54	110-220 AC/DC	2 x .25	2	Rectangular metal cased filter with flexible leads
NF-10431	280 AC/DC	2 x .02 each line	2 x 3.5	Fluorescent light filter rectangular metal case with flexible leads
NF-10431-1	280 AC/DC	2 x .02 each line	2 x 3.5	Same as NF10431, but with mounting for direct replacement of GE Catalog 89G365
NF-1C230	125 AC/DC	.09 line to line 2 x .005 line to grd.	—	Cardboard cased filter for vacuum cleaners and other light appliances
NF-10280-1	125 AC/300 DC	2 x 1.0 each line	2 x 2.5	Fluorescent light filter with solder lug terminals

VEHICULAR FILTERS

The most frequent Radio Interference problem encountered by the service technician is the improvement in signal to noise ratio in mobile applications of Citizen's Band, commercial, and amateur high frequency communications equipment. The vehicular filters listed will solve the problems encountered provided good grounding and bonding practices are followed and use made of suppressors.

Model 153—A Combination

SIGNAL GENERATOR and SIGNAL TRACER

The true test of the claim "two instruments in one" is: can each of the two units be used separately as well as in conjunction with each other? In the case of this versatile combination instrument, the answer is emphatically yes, for, the Signal Generator will function as a full service instrument with a range of 250 Kilocycles to 120 Megacycles and the Signal Tracer will follow any signal whether generated by a broadcasting station or injected by the Signal Generator section of Model 153. When used in combination with no dependence on outside signals, the compatibility of Model 153 provides ideal service, for unlike any standard signal tracer, the Model 153 first injects its own signal then traces that controllable signal to locate the source of trouble whether due to component or circuit by standard signal tracing technique.

SPECIFICATIONS:

SIGNAL TRACER: ● Hi-gain cascode pre-amplifier ● Pre-amplifier output available at front panel jacks for use with VTVM, oscilloscope or phones. ● Low distortion triode output stage. ● Audio Attenuator provided to prevent high signal overloading. ● 4½ inch permanent magnet speaker. ● Separate R.F. and Audio Signal tracing probes.
SIGNAL GENERATOR ● Covers from 250 KC to 120 MC in 5 bands. ● All popular and most used frequencies marked on panel in color. ● High stability electron coupled R.F. oscillator. ● Attenuator used on both R.F. and Audio circuits.

Model 153 comes complete with all necessary probes. Net Price **$28.40**

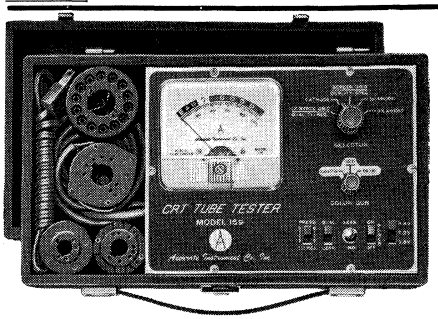
Specifications:

TESTING TRANSISTORS WITH MODEL 158

The Model 158 will test **all** transistors including NPN and PNP, Silicon and Germanium types, **without referring to characteristic data sheets.** The time-saving advantage of this method is self-evident. A further benefit of this service is that it will enable you to test new transistors as they are released, since no characteristic sheets are required.

TESTING TRANSISTOR RADIOS AND OTHER TRANSISTOR DEVICES WITH MODEL 158

An R.F. signal source modulated by an audio tone is injected into the transistor radio from the antenna through the R.F. stage past the mixer into the I.F. amplifier and detector stages and on to the audio amplifier. This injected signal is followed and traced through the receiver by means of the signal tracing section incorporated in the Model 158. The injected signal is heard on the front panel speaker as it is followed through the various stages.



Model 159 comes housed in a beautiful portable carrying case. Complete with sockets for all black and white tubes and all color tubes. Net price **$29.95**

Model 159 TESTS AND REJUVENATES

ALL PICTURE TUBES

***ALL* BLACK AND WHITE TUBES . . .**

From 50 degree to 110 degree types — from 8" to 30" types.

***ALL* COLOR TUBES . . .**

Test *ALL* picture tubes — in the carton — out of the carton — in the set!

Specifications:

Provides **separate** filament operating voltages for the older 6.3 types and the newer 8.4 types.

Properly tests the red, green and blue sections of color tubes individually—for eacn section of a color tube contains its own filament, plate, grid and cathode.

Detects tubes which are apparently good but require rejuvenation. Such tubes will provide a picture seemingly good but lacking in proper definition, contrast and focus.

Rejuvenation: Model 159 applies a **selective** low voltage uniformly to assure increased life with no danger of cathode damage.

RESISTANCE DECADES Model DR Series

High-Precision and Stability • Low Zero-Resistance • Long-Life Switches.

DR units provide convenient selection of precise resistance values. Typical applications are found in the areas of circuit design in simulation of various factors, and as standards in bridge-type measurements.

Standard units are available with 3, 5, or 7-dials. Each decade inserts a precise ohmic resistance in series with the terminals. The basic ohmic value of any decade may be multiplied by factors of 0, 1, 2, 3, thru 10, by setting its dial at the appropriate step. Switches are 12 position, 360-degree type. Actual resistance is the sum of zero-resistance and indicated resistance. Model DR units provide zero-resistance of less than 0.003 ohm per decade.

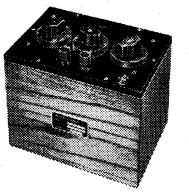
CAPACITANCE DECADES Model DK Series



Model DK units provide convenient selection of precise capacitance values with direct reading on the dials. Typical applications are found in bridge measurements and in experimental work such as circuit design. Standard units are 3-dial types. Paralleling switches provide steps of 0 to 10 by combinging four capacity values. All capacitance is connected across the terminals.

Capacitors are adjusted to the accuracies listed so that increments are correctly indicated on the dials. Zero-capacitance is less than 35 pf. Silver-mica and mylar dielectrics are used to obtain low-loss, high-stability characteristics.

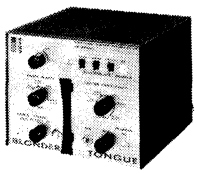
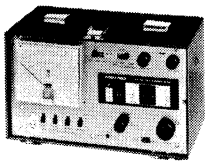
BLONDER-TONGUE

"Standards for Industry" Lab-Line

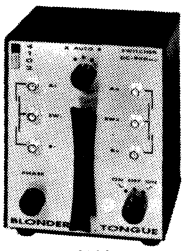
Designed specifically for the cable distribution industry and for those working with RF in research, development and production. All items are designed to match to 75 ohms and are not merely an adaptation of 50-ohm gear to our standard impedance. Units are of wide band design to cover all TV channels.



4122



FSM-2



4102

4122 U/V Sweep Generator—Solid-state all channel sweep generator has two switch-selected, electronically swept ranges: entire UHF TV Spectrum (470 to 890 mc); entire VHF TV Spectrum including subchannels (20 to 240 mc).

Sweep widths are continuously variable from 5 mc to the entire VHF or UHF range in one sweep. Center frequency can be tuned across the complete band on each range regardless of the sweep width setting. An output level attenuator is adjustable over a 60 db range. Automatic Level Control (ALC) on both ranges assures constant output. Fully regulated power supply for stable operation.

The sweep oscillator is varactor-tuned (no moving parts) for silent operation and long life. For VHF output, the UHF sweep is mixed with a fixed oscillator signal and the resultant difference signal is amplified and level controlled to cover the complete VHF TV spectrum.

The horizontal sweep rate of 60 cps derived from the power line, is available as a sine-wave at the front panel for connection to the oscilloscope. Use of the sine-wave horizontal permits oscilloscopes to be fed by available local line voltage for summation sweeps of large distribution systems. This feature makes the 4122 ideal for feeding a production test line. **$595.**

4114 UHF Sweep Generator—Same features as Model 4122, but the range of 470-890 mc only. Provision is made for sweep widths down to a few mc or up to the complete 420-mc range. The center frequency can be tuned across the complete range. **$325.**

FSM-2 UHF/VHF Field Strength Meter—Instantly convertible from VHF to UHF with the flip of a switch. Accurate and portable. Measures RF signals at 75 ohms impedance (VHF/UHF balun supplied for 300 ohm measurements) in two ranges: VHF (54-216 mc) and UHF (470-890 mc). Sensitivity variable from 100 microvolts to 3 v for full scale meter deflection. Reads both average and peak level by means of separate built-in detectors. Solid state circuitry. Very stable in operation. Battery and power line operation. Fully regulated power supply. **$395.**

4102 R. F. Switcher—Double-pole, double-throw, 75-ohm coaxial switch with a frequency range of DC-900 mc. It can be operated manually or automatically at a 30-cps rate. Fully solid state.

Ideally suited for making direct, immediate comparisons between input and output voltages of any circuit under test; for precisely measuring VSWR, amplifier gain or attenuation; and other application involving equipment performance evaluation against given standards. It can serve as a general laboratory oscilloscope switch. It permits two signals to be simultaneously displayed on an oscilloscope. Switching between the two signals is at the rate of 30 cps.

Either signal can be seen independently, or both may be seen superimposed. Employs four hermetically sealed S.P.S.T. switches, activated by solid state circuitry for accurate, dependable performance. Comparison measurements are free from errors due to scope calibration, nonlinearity or detector law characteristics. Provision for 360° phase adjustment. **$250.**

4107 Delay Line—Precision 75-ohm coaxial delay line for use as a match cable for impedance measurements and other laboratory applications where a standard cable of superior quality is required. Provides an accurate impedance standard for making fast and accurate VSWR measurements over a very wide bandwidth. **$125.**

4113 50/75 ohm Matchpad (DC-900mc)—Precision resistive, minimum loss, 50 to 75-ohm matchpad for the frequency range DC-900 mc. Used to match other test equipment with 50-ohm impedance to 75-ohm equipment. **$25.**

4111 Fixed Attenuators (DC-900mc)—Precision attenuator pads for 75-ohm applications available in values of 1, 2, 3, 6, 10 and 20 db attenuation. **Accuracy:** 1 db ± 0.1 db thru 20 db ± 1 db. **$20.00.**

4121 UHF/VHF Switch Attenuator (DC-900mc)—Covers entire UHF/VHF frequency range. 62 db total attenuation, switchbale in 1 db steps. 75-ohm impedance. BTF connectors are used with mating male connectors supplied. **$40.**

4123 High Output Detector (20-216mc)—Extremely sensitive, enables VSWR measurement of some devices without using external amplifier and gives usable output from extremely small input signals. **$50.**

4124 VHF Return Loss Bridge (30-216mc)—Fast, accurate wide band measurement of return loss (VSWR). Especially useful when the return loss is high. Standard 75-ohm impedance. **$50.**

4105 75/300 ohm Matching Transformer (10-216mc)—Wide band VHF transformer for precision applications. Matches balanced signals at 300 ohm to unbalanced signals at 75 ohms, or vice versa. **$30.**

4104 75-Ohm Detector (10-900mc)—Sensitive, thru-line type, RF detector used for insertion into a line or as terminated detector (precision termination plug supplied). Type BTF coax connectors. **$40.**

4103 50-75 ohm Transformer (10-216mc)—Wide band VHF 50- to 75-ohm transformer for critical laboratory applications. Matches test equipment with 50-ohms impedance to 75-ohm equipment. **$30.**

4112 UHF Matching Transformer (470-900mc)—Low-loss, wide band, UHF, 75- to 300-ohm transformer (balun). Matches balanced UHF signals at 300-ohms impedance, to unbalanced signals at 75-ohms impedance, or vice-versa. **$35.**

4106 75-ohm Two-Way Hybrid Splitter/Mixer (10-216mc)—VHF 75-ohm, two-way hybrid splitter/mixer. Useful for critical lab test set-ups where low VSWR and high isolation are needed. **$30.**

ONLY THE VERSATILE DESCO* Circuitracer*

GIVES YOU A 3-IN-1 ELECTRICAL TEST LABORATORY

LIST PRICE $4.95 Weighs only 2½ ozs.

Satisfaction Unconditionally Guaranteed

DON'T SEND A MAN TO DO A BOY'S JOB!

Are the technicians in your laboratories and shops using expensive meters and instruments for sample continuity and voltage checks? Speed up production through the use of the tool specifically designed for this application. A meter should be used only when the value of voltage, resistance or current must be known. Under any other conditions a Circuitracer will provide the required information faster and easier than expensive, bulky meters.

CIRCUIT TESTING WITH A CIRCUITRACER IS FASTER because the signal light is in the tip at the point of contact. This makes it possible to determine the existence of a circuit or voltage without removing the eyes from the test point to read a meter.

SAVE METER REPAIR MONEY BY USING DESCO CIRCUITRACERS. An overvoltage across a meter usually results in extensive damage which takes the meter out of service until repaired or replaced. The worst that can happen to your Circuitracer is a burned out lamp that can be replaced by the operator in less than a minute. Total cost, ten or fifteen cents for the lamp!

The CIRCUITRACER is the only electrical tester (other than expensive meters) that can test dead circuits, low voltage live circuits AND high voltage live circuits. It is made of the finest materials available and is designed for long life.

DESCO TEST PROBE ADAPTERS

INSURE CONNECTOR RELIABILITY

Manual probing of harness connectors while circuit testing can damage connectors and impair reliability. Desco Test Probe Adapters were developed to provide a test fitting identical to the pins and sockets in the connectors being tested. They make the same electrical and mechanical contact as the mating connector, and insure against scratching, bending and warping.

The adapters are made in three sizes to fit connectors using #12, #16 and #20 wire gauges. The sockets are gold plated copper with a brass sheath which retains a berylium copper spring. The pins are stainless steel to insure long life. All are made to rigid MIL-SPECS. The adapters will fit Desco Jumper Wires and the Desco Circuitracer* Tester interchangeably.

Several aircraft and missile manufacturers specify Desco Test Probe Adapters for most manual test connections. (names on request)

NON-DESTRUCTIVE D.C. VOLTAGE BREAKDOWN EQUIPMENT

Freed can supply non-destructive voltage breakdown testers for applications where the d.c. test voltage must be removed within microseconds in the event of a breakdown. Simultaneously the component under test is short circuited to prevent it from being damaged by its own capacitive charge.

The instrument contains a variable slope ramp generator to apply the test voltage in applications where the capacitive current in the test sample exceeds the preset leakage current limit. An indicating voltmeter holds the reading of the breakdown voltage until reset.

LOW FREQUENCY "Q" INDICATORS

Direct indication of "Q" at low frequencies, inductance, distributed capacity, impedance and dielectric loss can also be measured. Instrument may be used to study the magnetic properties of iron core material for stability as a function of applied voltage and losses as a function of the frequency.

Two units are available, the 1030-A indicates "Q" as a product of meter readings multiplied by dial settings, the 1030-B displays "Q" directly in digital readout.

INCREMENTAL INDUCTANCE BRIDGES

Direct in-line readings of inductance and conductance of iron core component at audio frequencies with or without superimposed direct current. The bridge uses the Owens circuit with provisions for measuring the series or parallel inductance and conductance of the unknown inductor; five precision resistance and capacitance decades are provided to indicate these values. "Q" or storage factor can be measured as the product of the inductive reactance and the conductance.

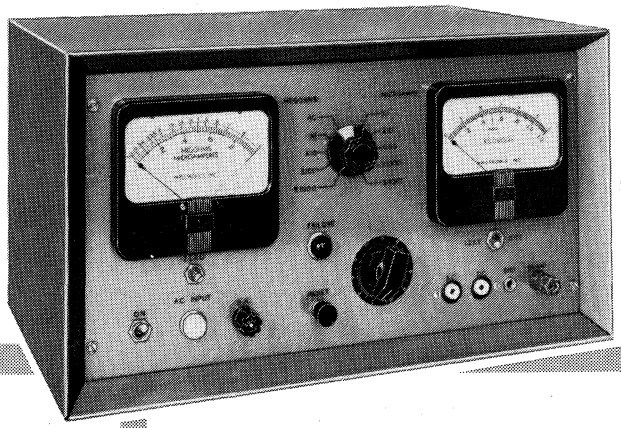
HIPOTRONICS AC/DC HIPOT TESTERS & MEGOHMMETERS

MODEL 306B



300 SERIES

The 300 series of Hipot Testers and Megohmmeters are voltage test sets which perform three different functions. They may be used for AC Hipot, DC Hipot and DC megohm tests. The "A" units perform IR tests to 1000 megohms and the "B" units to 100,000 megohms at 500 volts. Megohms at any other voltage may be determined from the volt and current meter readings.

- The sensitive thyratron operated overload relay adjustable from 20 microamperes to 5 milliamperes, will in many applications, permit non-destructive hipot tests to be performed.
- When the overload is set to 20 ua, the high voltage will generally trip on the build-up of leakage current before actual arc-over occurs.
- The "B" series has a quadruple range current meter which permits leakage currents as low as 0.01 ua to be read.
- The "A" series permits the reading of currents down to 1.0 ua.
- The KV meter has two ranges and is connected directly at the output for maximum accuracy.
- Other features include an AC input switch, fuse and pilot light, front panel output jacks, continuously adjustable output control, guard circuit on "B" series, and a failure light with reset button.
- Housed in a totally enclosed dust-proof cabinet.

Size: 17" W x 9½" H x 11" D
Weight: 115 volts, 60 cps, 1 ampere – all models
Input: 20 pounds

- Voltage to 6 KV, megohms to 100,000
- Overload adjustable from 20 microamperes to 5 ma.
- Performs non-destructive quantitative tests.
- continuously adjustable output from 0 to maximum
- Overload light with reset button, 2% meter accuracies

HIPOTRONICS MEGOHMMETERS

Hipotronics megohmmeters are precision instruments for use in production or laboratory testing of cables, capacitors, printed circuits, transformers, electronic assemblies, etc.

- The output voltages are both regulated with a ferro-resonant line and a solid state electronic regulator. Even with large capacitive loads on the 20 million range, there is no bounce.
- The indicating device is a high quality Weston with better than 2% accuracies on all ranges below 1 million and 3% on 10 million. The VTVM circuit driving the meter on the higher range models has no zero shift on any range.
- The short circuit protection is such that the output may be continuously shorted without injury to any component.
- Self contained calibrating resistors in the quadruple range models permit the operator to periodically verify the calibration.
- A three terminal output network (positive, negative and guard) permits grounded or ungrounded tests to be made.
- Dual color scale on multiple output voltage models improves readability.
- The units also contain a resistor and switch position for discharging both the internal and load capacitance.
- Available in 7 models, all with 115 Volt, 60 cps input and AC input switch, fuse and pilot light.

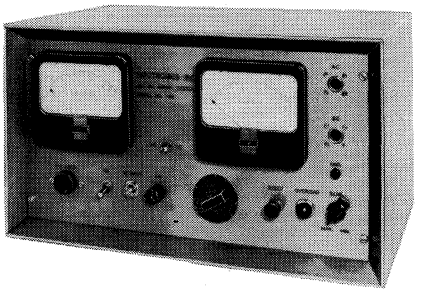
HIPOTRONICS NON-DESTRUCTIVE HIPOT & INSULATION TESTERS

NON-DESTRUCTIVE HIPOT TESTERS



Non destructive hipot tests may be made on many materials, components, test specimens etc. if a sensitive overload, coupled with a high speed HV cut-off is incorporated into an insulation tester. Hipotronics 100 series of hipot testers have a thyratron operated overload relay which cuts-out the HV in 5 milliseconds or less with leakage currents as low as 20 microamperes. The overload, when set on 20 ua, will generally trip the HV on corona and leakage currents which precede an actual breakdown, puncture or flash-over. The overload is continuously adjustable from 20 ua to 5 ma which enables the user to draw 5 milliamperes for capacitor charging, cable testing, power supply etc.

HOYT ELECTRICAL INSTRUMENTS

For Original Equipment and Replacement Applications

HOYT moving-coil Meters are built on the d'Arsonval principle using carefully selected jewel bearings and polished steel pivots. Accuracy within 2%. Alnico Magnets with soft-iron pole-pieces of uniform flux density used in all movements. Permanently correct balance assured by HOYT "cross arm" spiral wire balance. High torque to weight ratio. Quick response and good damping under all conditions. Choice of "knife-edge" or "lance" type pointers. Full 100° movements standard on most models. Many special type cases available. Inquiries invited.

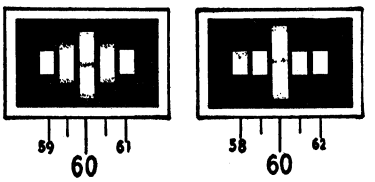
VIBRATING REED FREQUENCY METERS

J-B-T INSTRUMENTS, INC.

• **USES** — J-B-T Vibrating Reed Frequency Meters are used extensively in radio, telephone, and television service, on engine generator sets, in laboratories, in many types of electronic equipment, on panel and control boards, in inspection set-ups—wherever constant or known frequency is important to efficient operation of equipment. More than 25 years of continuous experience covering many thousands of these instruments are your assurance of quality for both commercial and defense applications.

• **OPERATING PRINCIPLE** — The patented, simplified design used in the J-B-T meter operates on AC or interrupted DC. Each reed is adjusted to respond by resonance to but one frequency. As the current excites the driving coil, the reed "in tune" with the frequency in the coil will respond by vibrating rapidly because of permanent magnet polarization and induced magnetism from the coil. The instrument is adapted to specified operating voltage by a series resistor. To determine frequency, simply read the reed.

• **RESPONSE PATTERNS** — These patterns differ with the increments of frequency between reeds. For example, at 60 cycles, half-cycle steps give the broad response shown below at left, whereas full cycle steps bring the sharp response at right. In general, the lower the frequency the greater the amplitude, the higher the frequency the less the amplitude. Thus a 12 cycle reed normally will have substantially greater amplitude than a 1000 cycle reed.



• **ADVANTAGES** — Guaranteed accuracy at reference temperatures of 77°F is ±0.3% or better of the AC frequency being measured, unless otherwise stated. Accuracy on interrupted DC may be somewhat less. High fatique safety factor for continuous operation. Temperature compensations are not required as temperature coefficient of reeds is only approximately 75 parts per million per degree F., negative.

• **STABILITY** — All meters are permanently calibrated at the factory and do not require subsequent adjustment. J-B-T reeds have relatively high Q characteristics, an especially desirable factor in electronic circuits. Wave form or external fields do not ordinarily have an adverse effect. Built with no pivoted parts and with lock washers at every critical point, these rugged meters can take rougher treatment than many instruments.

• **TRUST THE METER** — If a meter plugged in on a 60-cycle AC power line does not indicate exactly 60 cycles, trust the meter! Power supply may momentarily be off-frequency due to changing load conditions. All J-B-T Frequency Meters are meticulously calibrated at the factory, entirely independent of frequency of power supply. Production and inspection equipment are checked regularly against National Bureau of Standards frequency signals.

5 OR 7 REEDS

Used on standby power equipment. Handy for accurately measuring frequency of power source. 5 reeds (as illustrated), 58-62 cycles, or 7 reeds, 57-63 cycles, 100-130 volts. Other characteristics and accuracy same as Model 30-F. See Table of Dimensions, lines 4 and 5.

The meters described above are also available with square black molded cases designated as **FS series** per print SK-59, Rev. E For example, 30-FS is same as 30-FX except for the case.

REVISED DIAL APPEARANCE

Certain shipments during the life of this catalog will contain different dials from those pictured on these pages. Dials are being modified to show the revised J-B-T trademark adopted during the Silver Anniversary Year. At the same time, some 3½" frequency meters may also carry the phrase Series A after the model number (as in **34-FX** below) to denote improved ruggedness and sensitivity. Such instruments are completely interchangeable as to mounting dimensions and circuit requirements with the meters in this publication.

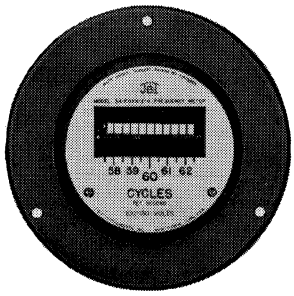
VIBRATING REED FREQUENCY METERS

J-B-T INSTRUMENTS, INC.

J-B-T 28th Year

3½" SEALED FREQUENCY METERS



FHXX TYPE Sealed meters, glass-to-metal construction, with solder terminals and detachable flange, supersede the former FHX sealed meters. While JAN-I-6, MIL-M-6B, and MIL-M-10304B (Type MR36) do not refer specifically to frequency indicators, the FHXX series uses the front mounting dimensions of these specifications, and meets or exceeds the sealing and electrical requirements including 3000 volt breakdown. Electrical characteristics and accuracy are the same as for corresponding F models without the HXX designation. Sampling procedure includes a test in water where the absolute pressure of the air above the water is reduced to 2.5 inches of mercury (approx. 57,000 ft. altitude) and is maintained for one minute. For dimensions, see Table, Line 8, and Print SK-51 Rev. E. Standard voltage is 100-130.

RUGGEDIZED AND ILLUMINATED METERS

Model with "RUG"—Sealed vibrating reed frequency meters and sealed elapsed time meters are available, when so ordered, to the intent of MIL-M-10304B, which covers ruggedization of other kinds of meters. This feature usually is specified only for extra-severe shock and vibration.

LL Construction—Requirements for lighted meter dials have led to illuminating the 3½" FHXX Series of sealed meters. Light from a source behind the panel is admitted through a sealed window built into the meter case. Inquiries are invited.

400 CYCLES, IN 1 CYCLE STEPS; 800 CYCLES

Among the variations which J-B-T produces on special order, are 21-reed, 390-410 cycles in 3½" case; and 11-reed; 780-820 cycles with 4-cycle increments. Quotations on request.

NOTE ON METER VOLTAGE

J-B-T Vibrating Reed Frequency Meters of all sizes normally are made with two studs and are designed to be connected across one phase of a multi-phase line. The single phase voltage where the meter will be used thus becomes the voltage to be specified for the meter. Special meters with extra studs are made for the purpose of using at two or more voltages, not additional phases.

2½" METERS — 5 REEDS

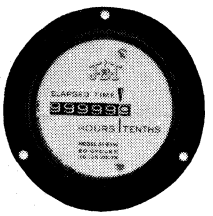
ELAPSED TIME METERS AND REED RELAYS

J-B-T INSTRUMENTS, INC.

• USES AND ADVANTAGES OF ELAPSED (OR RUNNING) TIME METERS

To record operating time of AC electrical and electronic equipment, these self-starting synchronous instruments normally register in 1/10th hour steps to 9,999.9 or 99,999.9 hours, then automatically reset. They are widely used for tube life, TV equipment, punch presses, conveyors, oil burners, ground support equipment, maintenance schedules, etc. J-B-T engineers recommend the AC type of elapsed time meter for superior accuracy, especially where voltage or ambient temperature vary widely.

6-Digit WIDE-NUMERAL ELAPSED TIME METERS

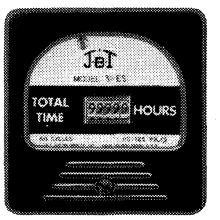


MODEL 31-EXW. Newest most easily-read, and most versatile of J-B-T elapsed time meters is Model 31-EXW, illustrated. Easily-read, wide 6-digit numerals register to 99,999.9 hours then automatically reset. Distinctive contemporary dial shows tenths in black on white, and units in white on black. The 3½" black molded case is interchangeable with Model 31-EX and FX types of frequency meters. Print SK-125 gives mounting information.

Model 31-EXW, 6-digits, 0-99,999.9 hours, 60 cy., 110-125 volts **$16.95**

SQUARE-CASED ELAPSED TIME METERS

MODEL 31-ES. A square black molded case, matching other 3" x 3" meters, differentiates this model from the round 31-EX. Ask for Print SK-110, Rev. F showing standard rear mounting 2¼" bet. centers of molded-in studs, new rugged case with overall depth 3-11/32" behind flange, and electrical studs on center line. Variations can be made for 99,999 hours (suffix U), 230 volts, minutes, matte finish, or 50 cycles.



31-ES, 60 cy., 110-125 volts, 0-9,999.9 hours. **$17.50**

3½" SEALED ELAPSED TIME METERS — 60 Cycles

MODEL 31-EHXX. Where rugged requirements make a completely sealed elapsed time meter desirable, this glass-to-metal construction with flat glass front and 3½" diameter separable flange, often is specified. Heavy-duty solder terminals are supplied. Every instrument is checked in a vacuum chamber. Overall dimensions and appearances match the FHXX series sealed frequency meters. Maximum voltage between terminals and case, 1,000 volts, R.M.S. The meter registers in 1/10 hour steps to 9,999.9 hours, then automatically resets. Tenths indicator is red on white, all others in white on black. Mount according to SK-85, Rev. C.

31-EHXX, 60 cy., 110-125 volts..... **$19.75**

3½" SEALED ELAPSED TIME METERS — 400 Cycles

MODEL 33-EHXX. This stable, self-starting 400-cycle elapsed time meter is extensively used for preventive maintenance and for reliability testing and checking in a wide variety of equipment. The instrument is entirely enclosed in a 3½" flanged case, glass-to-metal sealed construction with separable flange; heavy-duty solder terminals; flat glass front. 1/10 hours are shown in red on white, all other numerals white on black. The external appearance matches FHXX frequency meter series. For dimensional details see SK-61, Rev. B.

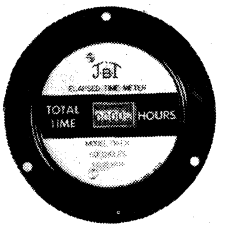
Its front mounting dimensions are the same as Type MR26 electrical indicating instruments in MIL-M-6B. Glass-to-metal seal makes the instrument completely tamper-proof. Ask for Print SK-68, Rev. G. (2½" 400-cycle meter, **Model 23-EHXX** also is made on special order.)

21-EHXX, 60 cy., 110-125 volts **$26.00**

BASIC 3½" ELAPSED TIME METERS



MODEL 31-EX. This self-starting instrument registers to 9,999.9 hours in 1/10 hour steps before automatically resetting. Red numerals on white are used for tenths, all others are white on black. Black molded case matches FX series 3½" frequency meters and completely encloses all parts. This case, with centered terminals, meets type MR34 or MR35 mounting dimensions of MIL-M-6B, also JAN-I-6. Referring to line 5 of the Table of Dimensions on the preceding page, barrel depth (B) is 2½", stud height above center (G) is zero, dimension (F) is ½", and all other measurements are as shown. RUGGEDIZED METERS TO MIL-M-7793C

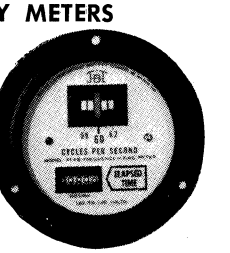
This specialized specification at present omits the popular 3½" sealed sizes. J-B-T 2½" and 3½" round sealed and ruggedized types can be certified as to various test conditions under present MIL-M-7793C and General Meter Specification MIL-M-10304B. Inquiries are invited on smaller sizes to MIL-M-7793C and subsequent revisions as they are released.

ELAPSED TIME — FREQUENCY METERS



31-FE SERIES. To conserve panel space and centralize information, this panel instrument combines elapsed time or running time meter with frequency reeds. It is used on motor generator sets and on electrical equipment where maintenance routine calls for periodic servicing. The J-B-T design, proved by years of field experience, uses a separate exciting coil for the reeds to achieve close control of reed amplitude and frequency. Reads 0-9,999.9 hours and 58-62 cy. with 5 reeds, for 100-130 volt operation; self starting. Tenths shown in red on white, all other numerals in white on black. Black metal case with front mounting per Table of Dimensions, line 6. Power consumption is 4.7 watts. For variations having 7, 9, or 11 reeds, not regularly stocked, such as Model 34-FE, see print SK-45. Rev. D.

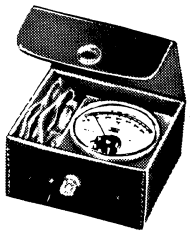
TEMPERATURE TESTERS AND ACCESSORIES

J-B-T INSTRUMENTS, INC.

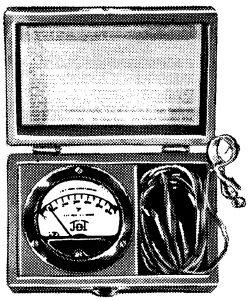
J-B-T 28th Year

FOR APPLIANCE SERVICING, QUALITY INSPECTION, AND LABORATORY SET-UPS

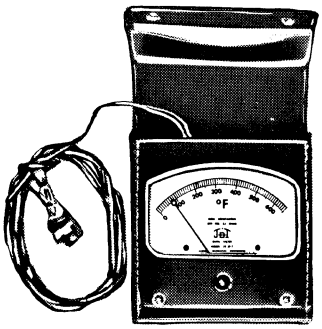


OVEN OR HEAT CHAMBER TESTERS

MODEL 23-JP-1. This popular portable indicating pyrometer saves time and furnishes reliable information in testing and setting thermostats on electric or gas ranges and other appliances by showing oven temperatures as they change. Standard size dial, 0-650°F., with 2⅜" scale arc reading, is used but covered by clear-plastic instrument front. The indicator is mounted on a black metal panel affixed inside a pocket-sized, black top-grain leather case 4½" x 2⅞" x 4¼" over hardware. Characteristic of more expensive pyrometers, the 23-JP-1 is automatically compensated for ambient temperature. Thus the tester eliminates calculations, avoids likelihood of serious error as temperature changes inside the instrument itself, and gives reliable direct readings. Supplied with attached SA-116, 5½' calibrated thermocouple, clip, and convection shield **$26.00**

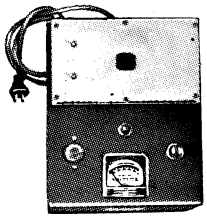


MODEL 32-JP-3. This time-tested model uses a rigid outer carrying case 6"x3⅞"x3¾". The glass-covered indicator shows 0-650°F. range in 10° divisions readable to 2½° on a 2⅜" scale arc. Exceptionally fast, continuous response. Automatic compensation for ambient temperature is a valuable feature whether the tester is used for service work, sales demonstrations, or inspection. Attached SA-116, 5½' thermocouple, clip for affixing to grill and convection shield included **$28.00**



NEWEST MODEL 32-JP-7. Most versatile, and easiest to read of J-B-T temperature testers, Model 32-JP-7 offers a 650°F scale more than 4" long. Automatic compensation for ambient temperature is included, so that temperatures are read directly and without calculations. The 32-JP-7 also provides color-coded external binding posts. These permit quick attachment or interchanging of various J-B-T thermocouples placed in one or more of the heat zones to be checked. An SA-116 5½' thermocouple with attachment clip and convection shield is supplied and is left attached when the tester is carried. For maximum usefulness in checking irons, washers, toasters, clothes dryers, etc., use appropriate accessory thermocouples. Tester price includes stitched Ever-ready case, 5" wide x 5½" high x 2¾" deep, of sturdy, scuff resistant black vinyl. **$29.50**

IRON TESTER



MODEL 32-JIT. Self-contained bench-type tester; checks all makes of irons; measures thermostat temperatures; shows open or short circuits. Automatically compensated for room temperature. Also indicates operating temperature of the sole plate (working surface) on non-electric or cordless irons. Includes two SA-162 resistance bulbs, two SA-116 thermocouples, electrical leads, and AS-TR-2 built-in transformer. **$124.00**

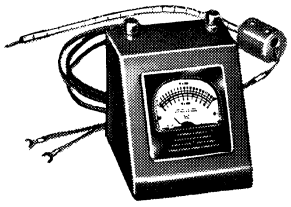
MODEL 61-JRT (LESS TRANSFORMER). Same unit, same scales except no reading in amperes; AS-TR-2 transformer omitted. **$110.00**

HEAT INDICATORS



MODEL 32-J PYROMETER IN SN-7 STAND. Mounted in sloping front black metal stand, 4¼" high x 4⅜" deep x 4⅛" wide. Compensated for ambient temperature. Medium resistance system, damped for quick reading on 2⅜" scale, assures ruggedness and pointer stability. For ±2% accuracy, use only the type and resistance of thermocouple and lead provided; if extra length—coil it—to maintain calibration. A protection tube usually is not required. For convenience keep an extra thermocouple and lead on hand.

DISCOUNTS

Trade discounts apply in most cases where LIST PRICES are shown.

ORDERING

Since previous editions of the MASTER are frequently referred to, it is important, when ordering, to mention specifically the edition and page number, also the catalog number of each item. This will avoid possible confusion and delay.

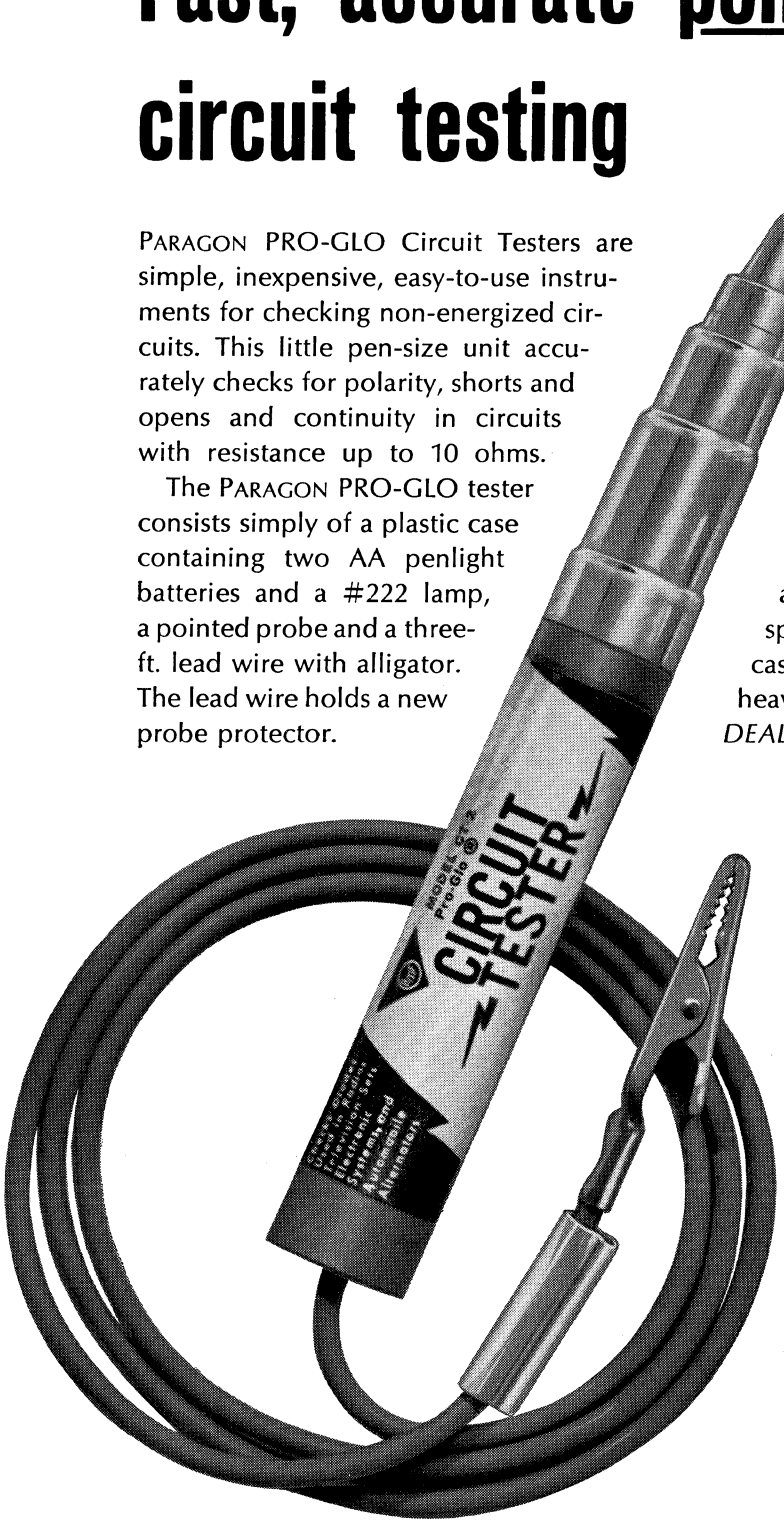
INVENTORY

While most distributors maintain a large and varied stock, they do not represent that they stock all manufacturers' products shown in this MASTER catalog.

Fast, accurate point to point circuit testing

PARAGON PRO-GLO Circuit Testers are simple, inexpensive, easy-to-use instruments for checking non-energized circuits. This little pen-size unit accurately checks for polarity, shorts and opens and continuity in circuits with resistance up to 10 ohms.

The PARAGON PRO-GLO tester consists simply of a plastic case containing two AA penlight batteries and a #222 lamp, a pointed probe and a three-ft. lead wire with alligator. The lead wire holds a new probe protector.



Servicemen and home repairmen appreciate the ease of use of this simple tester. Signal light at point of contact eliminates necessity for shifting eyes to read meter. Speed and accuracy of testing is increased. Low cost of device makes it practical for mass distribution in large service centers. Long operating life is assured — probe and battery contact spring are tin-plated beryllium copper, case is high-impact plastic and wire is heavy-duty, flexible test lead.

• **SHURITE** makes attractive, rugged, dependable instruments with accuracy well within ±5%, and the ability to duplicate readings. DC meters are polarized-vane solenoid type (moving-magnet or bridge-type construction where indicated): AC meters are double-vane repulsion type with jeweled bearing. The jewel construction costs more to build, but it pays off in continuing accuracy during a longer useful life. Models 550 and 950 fit 2-5/32" hole; Model 850 fits 2-5/32" to 2-1/32" hole. All are guaranteed.

*** * * NEW PRODUCTS — More sensitive meters without sacrifice of ruggedness, include: *A) three 0-500 DC Microammeters with 1000 ohms int. res.; *B) a 0-1 DC Milliammeter, Stock No. 8334, 800 ohms int. res., with Bridge-Type design to minimize effect of external magnetic forces; and *C) a Field Strength Meter, Stock No. 8903Z. Not cataloged but produced in quantity at extra cost are expanded scale meters, such as 10-12.5 DC Volts, accuracy ± .125 Volt. A handy new Cold Zone Tester is announced on the next page.**

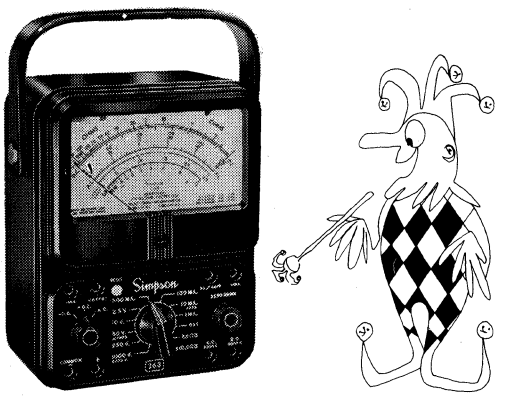
GOOF-PROOF VOM 260®-5P



FOR RANGES: SEE 260 VOM ABOVE

This Simpson Instrument has built-in meter protection approaching 100% which virtually makes this VOM GOOF-PROOF. The 260-5P will be of particular value in situations where the instrument may be used by inexperienced people; students, apprentices, and new employees. Technicians, too, will find the instrument ideal for exploring unfamiliar equipment, especially when lack of a schematic diagram poses the hazard of encountering unexpected high voltages when making tests.

Combined protection not found in any other VOM.

1. Reset button pops out to indicate overload.
2. You cannot reset circuits while overload is present.
3. Protective circuit does not require massive overloads which can cause hidden damage to the instrument.
4. All ranges are protected except those not feasible in a portable instrument — 10,000 and 5000 volts DC and AC; 10 Amps DC.

The 260-5P has the same ranges and takes the same accessories as the Simpson 260-5VOM.

Complete with test leads 7500 and operator's manual.

Simpson VU meters meet all the Electrical and Ballistic specifications established by Bell Laboratories and American Standards Association as required by broadcasting, communication and sound engineers. They are available with either type A or B scales. Type A scale stresses the level in VU for monitoring wire lines. Type B scale stresses per cent use of transmitter output and is the standard for broadcast service.

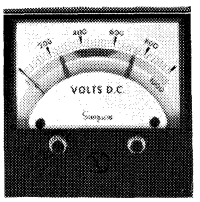
CONTACTLESS METER RELAYS—Self-Contained, 3½"



RUGGED SEAL CONSTRUCTION

Set points are adjusted thru external, front-adjusted gear drive. Set point is indicated by separate lance pointers. Sensing is accomplished thru an infinite life lamp and photo-conductors. A solid state switching circuit and D.P.D.T. slave relay are provided (internally) for each control point. Slave relays will switch 10 amperes @ 115 volts A.C.

ELECTRICAL SPECIFICATIONS

Calibration Accuracy. ±2% of full scale.

Control Point Adjustment: Control points are externally adjustable over 95% of the scale arc. Control point indication is within 2% of actual switching.

Control Point Differential: Difference between "on" and "off" is within .5% of full scale.

Power Requirements: 115 Volts A.C.; 50-500 CPS.

Output: D.P.D.T. relay contacts for each control point. Contacts rated @ 10 amperes, 115 volts A.C. resistive.

Meter Indication: Continuous, unaffected by control point setting.

Control Circuitry: Fail-safe. Both slave relays "open" in event of power failure.

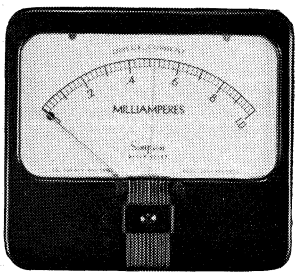
4½ METER RELAY—FRONT ADJUSTABLE—MODEL 29XA



General: Model 29XA Relays are of the D'Arsonval Type. Externally adjusted limit setting contacts are non-locking and intended for circuits with external locking provisions or for light duty non-locking applications.

Calibration: Accuracies ±2% of full scale.

Contacts: Gold Alloy. For use @ 15 volts DC @ 10 milliamperes maximum on resistive or diode protected inductive loads.

Contact Adjustment: Contacts are externally adjustable over 95° of 100° scale arc, and within 5° of each other. The pointer will indicate the contact make position within 2° of actual contact intercept.

Contact Differential: Normally, contacts will close within 2% of full scale value and break within 10% of full scale value.

Insulation: Breakdown 300 volts AC from Relay contacts to meter circuit. 3 KV AC from Relay terminals to mounting panel. (All Tests at 60 cycles.)

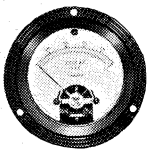
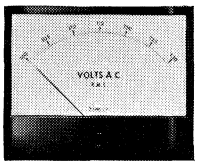
SEGMENTAL VOLTMETERS – "Rugged Seal" Construction





The significant portion of the overall voltage scale of these meters is expanded to occupy the full scale length. In addition to the stock expansions and accuracies shown, special segmental voltmeters can be built on order.

Meters are completely sealed and commercially ruggedized; metal cased and shielded; and are not affected by mounting on steel panels. Movement is external magnet type shielded by the metal case.

Accuracies shown are in percent of center scale value.

All of these AC segmental voltmeters are the RMS sensing type which are preferred when working with distorted waveforms.

†AC ammeters are self-contained. Higher range AC ammeters can be supplied with external current transformers and include 2 foot leads. External current transformers should be ordered separately. DC ammeters are self-contained for ranges up to and including 50 amperes. Higher range DC ammeters (50MV) listed above can be supplied with external shunts and include 5 foot leads. *These meters use the Hi Flux magnet and cannot be recalibrated for use on steel panels.

SPRAGUE TEST EQUIPMENT

TO-6 TEL-OHMIKE® CAPACITOR ANALYZER

The TO-6 TEL-OHMIKE capacitor analyzer is a must for checking all capacitors. It is a moderately priced instrument with laboratory quality and accuracy—the highest accuracy of any instrument of its type available to the service trade!

- **LEAKAGE CURRENT** of electrolytics measured directly on meter. Four ranges; .06, .6, 6, and 60mA. Three ranges of DC voltage (continuously variable within each range) permit testing capacitors at exact rated voltage up to 600 volts.
- **POWER FACTOR** of electrolytics, up to 50% measured by Wien Bridge.
- **METER PROTECTOR** of solid-state design allows severe accidental over-loads without burn-outs.
- **MAGIC-EYE TUBE** simplifies bridge balancing for capacitance and power factor measurements. High gain amplifier provides greatly improved sensitivity.
- **PUSH-BUTTONS** color-keyed for instant range selection.
- **MODERN CASE:** Silver-grey hammertone finish, panel is charcoal grey with highly contrasting white designations. Measures 8 7/8" high, 14 5/8" wide, 6 1/8" deep. Weight only 13 pounds.

MODEL TO-6 ..... **115 VAC/50-60 cy**
MODEL TO-6S ..... **115-230V/50 cy**

- **CAPACITANCE BRIDGE** measures up to 2000 μF. Five overlapping ranges include exclusive 1 pF to 100 pF range. Special shielded transformer for bridge voltage. Extremely low AC voltage; 1.35 volts for electrolytic capacitors, 2.85 for all others, permits safe testing of all low voltage capacitors.
- **INSULATION RESISTANCE** of papers, ceramics and micas directly read on large meter. No guessing with neon lamps. Dual range—to 10KMΩ@ 30V for low voltage units . . . to 50KMΩ@ 150V for higher voltage components. Fast charge feature speeds testing of high capacitance units.

TEL-OHMIKES FOR RACK MOUNTING

Electrically identical to TO-6 and TO-6S. These models have a standard 19"w. x 10½"h. panel so that it can be mounted in standard relay racks.

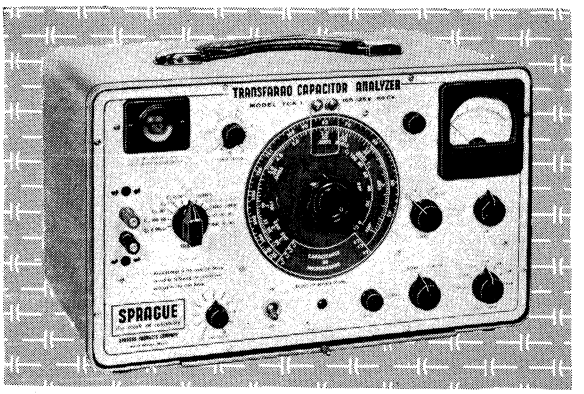
TCA-1 TRANSFARAD®



The Transfarad is specifically designed to safely test all low-voltage, low-leakage aluminum, tantalum, film, paper, and ceramic capacitors used in transistorized circuits. A must for modern industrial laboratories and electronic service shops.

- **INSULATION RESISTANCE** directly read from 50 megohms to 20,000 megohms. Only 25v d-c is applied, permitting measurements on low voltage ceramic, mica, and film capacitors. IR of ceramics rated below 25v may be calculated from leakage current measurement at exact rated voltage.
- **LEAKAGE CURRENT** measured directly on meter at exact rated d-c voltage of capacitor. Sensitive circuit makes full scale measurements from 0.6 μA to 600μA in seven ranges.
- **POWER FACTOR** measured by Wien bridge from 0 to 50 per cent.
- **MAGIC EYE** null detector in high-gain amplifier has sensitivity control permitting accurate measurement of small capacitors.
- **SHORT-TIME STABILITY** is assured by dual regulation of the power supply. Specially processed etched circuits and complete encapsulation of the critical bridge-null amplifier insure long-time stability.
- **BINDING POSTS** are shielded against strays, assuring greater accuracy during low capacitance measurements.
- **FOR SAFETY** the capacitor under test is automatically discharged after testing. Three wire line cord grounds instrument case.
- **OPERATING PROCEDURES** are clearly shown on convenient pull-out slide.

SAFELY TESTS TRANSISTOR CIRCUIT CAPACITORS INCLUDING TANTALUM TYPES

- The only analyzer which gives the complete story on tantalum and other low leakage current capacitors.
- **CAPACITANCE BRIDGE** measures 1μμF to 2000μF in five overlapping ranges. Only 0.5 volt is applied to the bridge from a continuously adjustable power supply. The voltage across the capacitor is less than this applied voltage, the amplitude depending on the capacitance being measured. No possibility of overheating or deforming any low voltage capacitor during measurements.

...features

LOW COST. Outstanding performance is provided in a low cost instrument providing digital readout.

ACCURACY. Warranted accuracy is maintained for all internal contributing factors and the listed external conditions.
(1) Ambient Temperature—60° to 115° F.
(2) Power Source—105 to 125 V—50 to 60 CPS.

READING AMBIGUITY. There is no ambiguity or reading (even for small changes) and no allowance need be made. Bi-directional voltage variations are followed without distracting backtracking. Input voltage drift can be continuously observed.

RESOLUTION AND REPEATABILITY. The instrument can be easily read and is sensitive to small voltage changes. For short term observation, under stabilized ambient conditions, unit will repeat and is easily read to .05% or less. Thus, for many applications, the instrument can be used to a comparative accuracy of .05% full scale.

CALIBRATION EASE. High input impedance permits direct calibration with Standard Cell. Under normal usage, recalibration is required only at 6 month intervals.

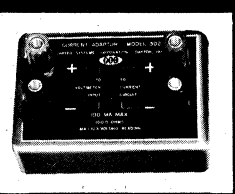
RELIABILITY. High reliability is achieved by a silicon transistor amplifier and the absence of stepping switches and relays. Normal overloads or incorrect polarity will not damage instrument.

READING SPEED. Instrument comes to reading balance quickly and without annoying creep. Average reading time is approximately 2 seconds.

INPUT. A 3-terminal color coded input group is furnished whereby choice is provided for grounded or floating input. A jumper link is furnished so that either negative or positive side of the input can be grounded.

DECIMAL POINT. Decimal points are illuminated by a single, long-life easy-to-replace bulb. The decimal point shifts with range selector.

OTHER USES. By use of compatible transducers, the DigiTec can be used to display readings of current, pressure, speed, position, flow, angle or any parameter. Current adaptors are available to provide readings of from .1 μ A to 2 AMP.



READING RETENTION. A jack is located on the rear of the case to permit holding of a displayed voltage by means of an external switch. Suitable switches complete with cord and plug are available as optional accessories.

CARRYING HANDLE. For the portable models, the convenient carrying handle also serves to set the viewing angle for optimum readability.

Certificate of Accuracy furnished with each instrument (traceable to NBS)

MODEL 1900 PANEL INSTRUMENT SERIES

GENERAL

The 1900 Series is an integrated line of a-c and d-c panel instruments, providing a carefully selected choice of sizes, case styles, accuracies, pointers, scales and ranges. Particular attention has been paid to designing instruments that will present an overall appearance of harmony, even when random sizes are mounted side by side. Mounting bezels provide three types of mounting—recess, flush and conventional.

One of the many features of this new Weston series is the method of construction which provides quick interchangeability of fronts and easy access for adjustment or service, if ever required. From their spring-backed jewels to their unique fastening clips, the 1900 Series incorporate the fine workmanship and quality that has always been associated with Weston.

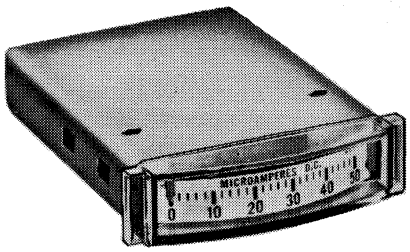
THIN LINE PANEL METER MODEL 111

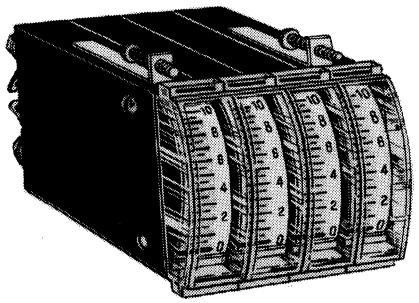
Completely Flat — Can Be Stacked Side-by-Side

New Self-Shielded Mechanism

Saves Panel Space

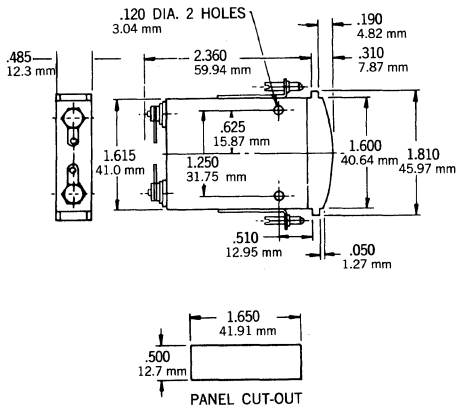
Designed to Meet ASA C39.1 Specifications

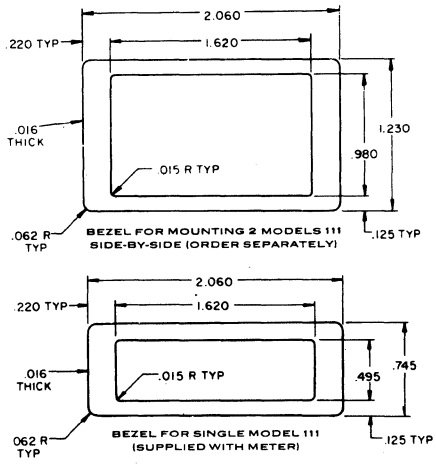




The Model 111 utilizes a completely new mechanism design. This is the only edgewise instrument incorporating a flat cormag mechanism design for shielding purposes. The magnet is inside the moving coil as in all Weston CORMAG® designs and the resulting inherent shielding allows mounting on magnetic or non-magnetic panels without need for adjustment, as well as the ability to "stack" meters side-by-side without any interaction. The mechanism also has a shock absorption jewel arrangement to assure long life.

ALL DIMENSIONS ARE APPROXIMATE





SPECIFICATIONS

Accuracy: 2% of full scale value for DC
3% of full scale value for AC Rectifier Type

Scale Length: 1.25 inches

Pointer: Red Lance Type

Movement: New self shielded thin line Cormag mechanism. Shock mounted jewel arrangement.

Ranges: Voltage: 50 mv minimum
300 volts maximum
self-contained
Current: 50 ua minimum
2 amps maximum
self-contained

Mounting: Meter can be mounted either horizontally or vertically. Order proper meter from price list for the required type mounting. Most ranges stocked for horizontal mounting.
Mounting clips fasten to meter behind panel —no screws on front of panel. For "stacking", thru-holes are provided so stack can be bolted together.

The Model 121 is basically a 2½ inch flat edgewise meter offering many benefits not generally offered in this type of meter. To eliminate parallax normally associated with edgewise meters an "in-line" scale is standard; a red pointer increases readability. For those requiring lighting, self-contained illumination is available as an optional feature. The bulbs are removable while the meters are mounted in the panel — even when "stacked" side-by-side. • The Model 121 utilizes a completely new mechanism design. This is the only edgewise instrument incorporating a true flat CORMAG® mechanism design for shielding purposes. The magnet is inside the moving coil as in all Weston Cormag designs and the resulting inherent shielding allows mounting on magnetic or non-magnetic panels wihtout need for adjustment, as well as the ability to "stack" meters side-by-side without any interaction. The mechanism also has a shock absorption jewel arrangement to assure long life.

SPECIFICATIONS

Accuracy: 2% of full scale value for DC
3% of full scale value for AC rectifier Type

Scale Length: 1.9 inches; Anti-parallax in-line scale

Pointer: Red Lance Type

Movement: New self shielded thin line Cormag mechanism. Shock mounted jewel arrangement.

Ranges:

Voltage	Current:
50 mv minimum	50 ua minimum
500 volts maximum	20 amps maximum
self-contained	self-contained

Mounting: Meter can be mounted either horizontally or vertically. Crder proper meter from price list for the required type mounting. Mounting clips fasten to meter behind panel — no screws show on front of panel. For "stacking" thru holes are provided so stack can be bolted together.

Illumination: Two G.E. 328 lamps are used. Recommended operating voltage — 5 volts (less than 200 ma per bulb). Expected life greater than 5,000 hours.

Dielectric: 2000 volts RMS

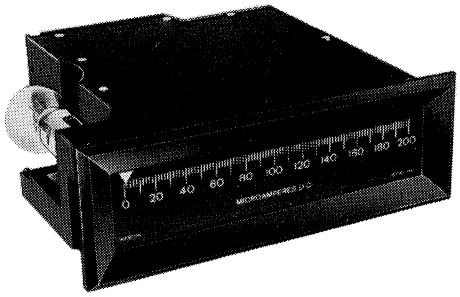
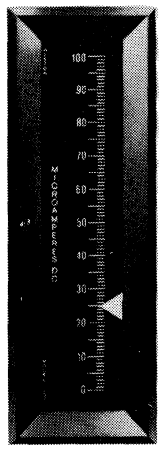
Shielded Cormag® Mechanism

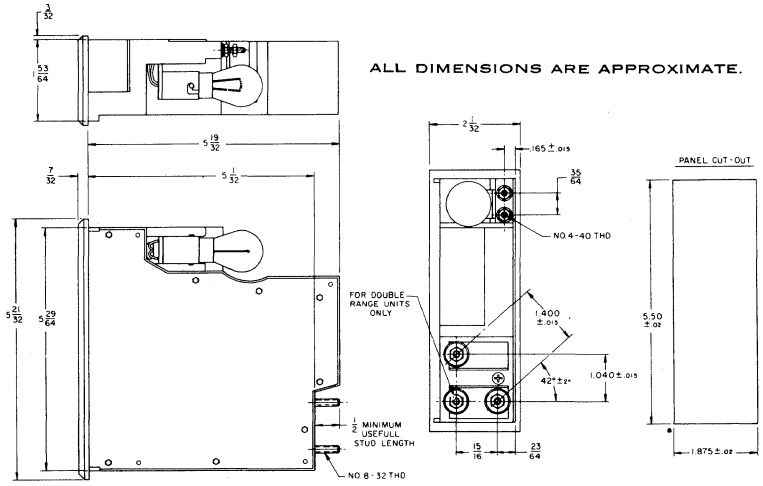
All Glass Optical System

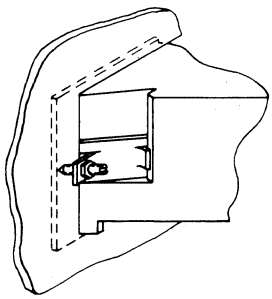




The basic mechanism is of the standard Weston CORMAG design which offers inherent self-shielding. This means that these units will be unaffected by panel material, normal magnetic fields created by current carrying conductors and can be mounted side-by-side with no loss of accuracy.

SPECIAL FEATURE: Filters may be placed behind the scale so that the pointer will change color at a fixed point. Up to two colors (plus a white pointer area) can be provided. Standard colors are red, green or amber.





No mounting screws are visible from front of the panel—two clips behind the panel securely lock the meter in place.

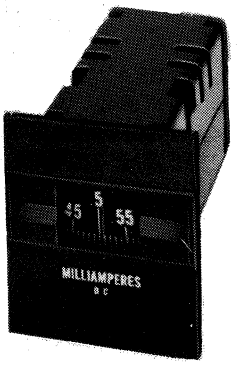
MODEL 1209 SERIES (Projected Moving Scale Meter)

...8" OF SCALE IN A 2½" FRONT

- RETAINS ALL THE ADVANTAGES OF AN 8-INCH METER
- ELIMINATES PARALLAX
- 1% ACCURACY (½% OPTIONAL)
- SELF-ILLUMINATED SCALE
- REQUIRES ONLY 7 SQUARE INCHES PANEL SPACE
- SELF-SHIELDED MECHANISM
- SELF-CONTAINED



Standard meters use black background scales with white figures. White background scales available.

APPLICATIONS

For the first time, designers can standardize on one meter which fills the complete range of requirements: small size • long scale length • accuracy • self illumination • versatility in styling (proprietary bezels available at a normal cost). With Weston's new PMS instruments, equipment dimensions can now be based on optimum space requirements rather than on meter size.

HOW THE PMS MODEL 1209 WORKS

A simple optical system projects a moving scale onto a coated window. The scale is rotated by a self-shielded Weston Cormag mechanism of proved design and reliability. Pivot roll is eliminated in PMS panel meters, because the mechanical axis is vertical.

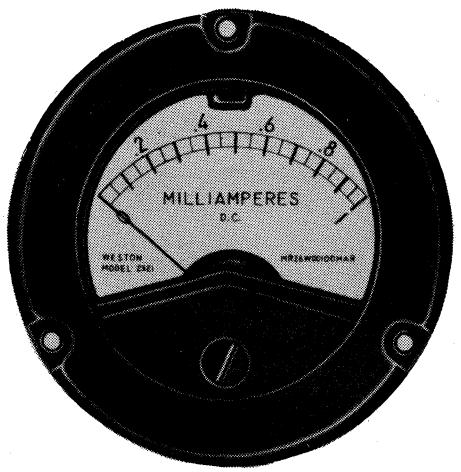
- Highest QPL sensitivities.

This completely new 2521/2531 Series of Weston ruggedized instruments is built to "take-it". New design concepts, new materials insure dependable, accurate service under extremes of shock, vibration, temperature, humidity and general abuse. Simplified design allows moderate prices.



Designed to comply with MIL-M-10304B, they are made from non-brittle materials... all components are secured with demountable and reusable fasteners... scale plate, mechanism and shatter-proof mounting base are easily removed as a complete sub-assembly for quick repair. The 2521/2531 Series is another example of famous Weston quality, and is keynoted by the fact that even 20 microampere sensitivities are ruggedized. For applications in the vicinity of strong rf fields, these meters can be completely shielded by specifying conductive glass windows.

GENERAL

2930 Series comprises a group of AC and DC panel meters mounted in a sloped front mounting base constructed of high impact resistant plastic. These instruments are primarily designed for "bench testing" requirements both in educational and industrial laboratories. They use quality components throughout — the indicating instrument is one of the well known Weston 1900 Series of panel meters which have a proven history of accuracy and reliability.

The ranges listed are stocked by authorized Weston Distributors and special ranges can be obtained through local Weston Modification Centers. The cataloged meters are supplied with standard scales and lance type pointer, except the null indicators, which have a knife edge pointer and mirror dot at null.

A colored plastic insert is supplied on all units — yellow denotes a DC unit and red an AC unit.

D-C MICROAMMETERS

Model 622 microammeters, low resistance type, are designed to function on the lowest amount of energy consistent with reasonable performance. They should be used in circuits when but little energy may be abstracted by the instrument such as in the output of vacuum thermocouples.

High resistance microammeters should be used wherever circuit conditions will permit. They will stand more severe service and in general are more rapid in indication than low resistance instruments.

Model 622 Thermo Instruments

Accurate within ½ of 1% on a-c of frequencies stated and within 1% on d-c at 25°C.; within 1% on a-c of frequency stated and 1.5% on d-c from 20° to 30°C — Scale length 6.1" (155 mm).

Dimensions { 8.75 x 7.75 x 4.06" / 222 x 197 x 103 mm } Approx. Weight { 8.5 lbs. / 4 kgs.

Thermocouple Type — Molded Bakelite Case

Model 622 thermo instruments are basically ultra-sensitive temperature compensated d-c millivoltmeters calibrated with replaceable thermoelements.

Plug-in vacuum type elements, in which the heater and couple are contained in an evacuated glass bulb, are used in thermo milliammeters and thermo voltmeters. The overload capacity of these thermo-elements as used in Model 622 is exceptionally high, at least 2 times normal for all ranges.

External compensated type elements are used for the thermo ammeters. Temperature compensation is obtained through use of compensating strips which maintain the cold ends of the thermocouples at the temperature of the heater blocks. Overload rating is 1.5 times normal.

THERMO AMMETERS

External Thermoelement Type

Supplied with one Type C thermoelement of range desired and 5 foot shielded leads for connecting thermocouple to instrument. Multi-range combinations obtained by use of additional thermoelements of ranges desired. Instrument scales are directly calibrated to original thermoelements, or to average data where additional couples are supplied for multi-range combinations. Can be used on d-c and a-c ranges below 20 amperes; on a-c only for higher ranges. Frequency errors less than ½ of 1% up to 35 megacycles and less than 2% up to 65 megacycles.
